

MARYLAND STATE COUNCIL ON CHILD ABUSE & NEGLECT ANNUAL REPORT

JANUARY 1, 2018 – DECEMBER 31, 2018

The Power of **COMMUNITY**

Promoting Child Well-Being
Strengthening Families & Communities
Preventing Child Maltreatment

ACKNOWLEDGMENTS

With tremendous gratitude, we acknowledge the many individuals and organizations who share their time, experience, expertise and passion for promoting child well-being and preventing child maltreatment and other adverse childhood experiences (ACEs) *before they occur*. Special thanks this year go to:

- Council Members for sharing their expertise and for the many volunteer hours they have contributed to the State Council on Child Abuse and Neglect (SCCAN).
- Council Chair, Wendy Lane, Maryland Essentials for Childhood (EFC) Committee Chair, Joan Stine, Workgroup Chairs, Melissa Rock, Rachel White, and Elizabeth Letourneau for their leadership.
- Council Member agencies for dedicating staff time and expertise to the important cross agency work of the Council and Maryland Essentials for Childhood. Interagency collaboration and coordination is critical to effectively addressing childhood trauma.
- Maryland Essential for Childhood Workgroup Chairs: Pat Cronin, Claudia Remington, Kay Connors, D'Lisa Worthy, Diane Banchiere, Joan Stine, Melissa Rock, Cathy Costa, and Wendy Lane.
- Maryland ACEs Connection Community Managers, Erik Weber, Ruby Parker, and Claudia Remington.
- Delegate C.T. Wilson for sponsoring and tirelessly advocating for HB 486 (S.E.S.A.M.E. legislation) and HB 687 (Child Sexual Abuse Civil Statute of Limitations Reform) to prevent child sexual abuse *before it occurs*.
- Senator Clarence Lam for sponsoring SB 541 (S.E.S.A.M.E. legislation) to prevent child sexual abuse in school settings *before it occurs*.
- The Maryland General Assembly for unanimously passing S.E.S.A.M.E. legislation to prevent child sexual abuse in school settings *before it occurs*.
- Pat Cronin, Executive Director of The Family Tree, her Board, and staff. Special thanks go to President, Charles Roebuck, and the Board for funding the ACE Interface Project, supporting ACEs Education & Advocacy Day in Annapolis for policy makers to ensure that Maryland becomes a Brain Science-Informed State, and testifying on behalf of HB 486, S.E.S.A.M.E. legislation. Special thanks also go to Pat and the staff of The Family Tree for their co-backbone support of Maryland Essentials for Childhood Initiative, particularly Ruby Parker and Naketta Lowery for their leadership and support of the ACE Interface Project.
- Vanessa Milio, Executive Director of No More Stolen Childhoods, and No More Stolen Childhoods Board by lending their expertise to efforts to pass S.E.S.A.M.E. legislation and HB 687 (Child Sexual Abuse Civil Statute of Limitations Reform) through advocacy, testimony, media, and social media. Special thanks go to Founder, Wayne Coffey; Board President, Michael Fitz-Patrick; and Secretary, Brooks Patternotte for their testimony on the bills; and, Vice President, Christian Mester, for sharing his legal expertise.

- Melissa Rock, Rachel White, and Advocates for Children and Youth for developing and providing the infographics *“Adverse Childhood Experiences: They are More Common Than You Think”* and *“Impact of ACEs on Workforce”* publications for use in MD Essentials for Childhood efforts to educate Maryland policy makers and citizens on the cost (fiscal and human) of ACEs in Maryland.
- The ACE Interface Master Trainer Cohort for their continued commitment to ensuring Maryland becomes a N.E.A.R. Science-Informed State: Dorinda Adams, MSW, LGSW; M. Saida Agostini, Ulysses Archie, Jr.; Delegate Vanessa Atterbeary; Christina Bethell, PhD; Wendy C. Blackwell; Pamela M. Brown, PhD; Kay Connors, LCSW-C; Patricia Cronin, LCSW-C; Robin Davenport; Amber Guthrie; Joyce Harrison, MD; David Humphries; Lauren Jenkins; Frank Kros, MSW, JD; Naketta Lowery, CFLE, COS; Sarah Manekin; Lt. Veto Mentzell; Cathy Meyers, LCPC; Deborah Nelson, PhD, NCSP; Ruby Parker; Kathy Powderly; Claudia Remington, JD; Steve Rohde; Diane Shannon, LCSW-C; Teresa Simmons, MSW, LCSW-C; Joan Stine, MHS, MS; Honorable William Tucker; D’Lisa Worthy, M.Ed; and Steven Youngblood, LCSW-C.
- The ACE Interface Master Presenters for joining the ACE Interface Project this year, dedicating their valuable time and skills to the efforts to ensuring Maryland becomes a N.E.A.R. Science-Informed State: Nana Ama Adom-Boakye, Carol Auerbach, Jan Brewer, Kip Castner, Elizabeth Garcia, Latrice Gray, Jasmin Haley, Heather Hanline, Laurie Hauser, Candace Hawkins, Kelly Hutter, Donna Jacobs, Beth Anne Langrell, Denise Messineo, Amie Myrick, Alexandra Podolny, Jennifer Redding, Martha Ruiz, Matila Sackor, Alisha Saulsbury, Jamie Shepard, Ligia Teodorovici, Lacey Tsonis, Harriet Smith, Jonathan Williams, and Harold Young.
- SCCAN- MD Essentials for Childhood’s ACEs MD Policy Maker Education Workgroup: Melissa Rock, Rachel White, Joan Stine, Dan Press, Stacey Jefferson, Frank Kros, Pat Cronin, Vanessa Milio, Wendy Lane, Helga Luest, Irnande Alterma, Jan Brewer, Kay Connors, Ruby Parker, William Jerrigan, Patricia Cobb, Christina Bethell, Jamie Shepard, Jessica Wheeler, Steven Youngblood, Shruti Bhatnagar, Linda Robeson, Nana Ama Adom-Boakye, Marie Stratton, Alexandra Podolny, Cathy Meyers, Candace Hawkins, Pamela Brown, Lisa Marts, Erica LeMon, and Liz Oppenheim,
- SCCAN- MD Essentials for Childhood’s Child Sexual Abuse Prevention Legislative Workgroup: Elizabeth Letourneau, Vanessa Milio, Jennifer Alvaro, Megan Benevento, Rachel White, Joan Stine, Pat Cronin, Jena Cochrane, Rowan Powell, Joyce Lombardi, Janis Sartucci, Erick Weber, Noy Davis, Ruby Parker, William Jerrigan, Jessica Wheeler, Susan Hansell, Lisa Marts, Cathy Meyers, Linda Robeson, and Wendy Lane.
- Vanessa Milio and Becca Lestner for the design of legislative talking points for HB 486/SB 541, social media images, and S.E.S.A.M.E. Social Media Toolkit.
- Nicole Atkinson, Owner of Push to Start, for her pro bono publications and communications services on behalf of Maryland’s S.E.S.A.M.E bill.
- Shannon Sollenberger, Legislative Counsel to the Senate of the Commonwealth of Pennsylvania for sharing her expertise and experience and important lessons learned in passing S.E.S.A.M.E. legislation in Pennsylvania.
- S.E.S.A.M.E. President, Teri Miller for sharing her time, expertise and national S.E.S.A.M.E. organization resources in support of passage of Maryland’s HB 486/SB 541.
- Dr. Chester Kent for sharing his time and expertise to inform Maryland’s S.E.S.A.M.E. legislation and for traveling to Maryland to testify on behalf of the bill.

- Jetta Bernier, Executive Director of Mass Kids, and Rush Russell, Executive Director of Prevent Child Abuse New Jersey, for sharing their time, expertise, and lessons learned from efforts in their states to pass S.E.S.A.M.E. legislation.
- The Legal Resource Center for Public Health Policy at the University of Maryland Francis King Carey School of Law, and Professor and Director, Kathleen Hoke, as well as, law students Kevin Redden, Lauren Fash, and Ariel Neumann, for their legal expertise, testimony, and support of efforts to pass S.E.S.A.M.E. legislation in Maryland.
- The following organizations for their support and advocacy on behalf of passing S.E.S.A.M.E: Maryland Association of Boards of Education (MABE); No More Stolen Childhoods; The Moore Center for the Prevention of Child Sexual Abuse; Maryland PTA; American Academy of Pediatrics, Maryland Chapter; Prevent Child Abuse, Maryland, The Family Tree; Advocates for Children and Youth (ACY); Parents' Coalition of Montgomery County; Child Justice; Maryland Children's Alliance; Baltimore Child Abuse Center; Citizens' Review Board for Children; Maryland Family Network; Maryland Catholic Conference; CASA; Parents' Anonymous of Maryland; Center for Children; Council for American Private Education (CAPE); and National Association of Social Workers, Maryland Chapter (NASW);
- The Maryland State Education Association, particularly Sean Johnson, and the Maryland Association of Nonpublic Special Education Facilities, particularly Dorie Flynn, for their good faith negotiations on HB 486/ SB 541 in order to find solutions to their concerns about the bill, while ensuring the protection of the students in their care.
- Marci Hamilton, CEO and Academic Director of Child USA, and interdisciplinary think tank to prevent child abuse and neglect at the University of Pennsylvania for sharing her time and expertise and written testimony on statute of limitations reform, as well as the resources of Child USA.
- Alix Boren, JD, Executive Director of Child USA, for her legal research on Maryland's civil statute of limitations.
- Kathryn Robb, JD, Executive Director of Child USA Advocacy, for her outstanding and considerable legal research, written testimony, advocacy, and oral testimony on behalf of HB 687 Maryland's Child Sexual Abuse Statute of Limitations Reform bill.
- Delegate C.T. Wilson, SNAP, Key School and individual child sexual abuse survivors for their powerful, compelling, and courageous oral and written testimony, media advocacy, and legislative advocacy to pass HB 687 Maryland's Child Sexual Abuse Statute of Limitations Reform bill.
- Maryland Child Abuse & Neglect Fatality (MCANF) Workgroup: Rich Lichenstein, Wendy Lane, Cathy Costa, Joan Stine, Melissa Rock, Rachel White, Denise Wheeler, Pam Dorsey, Linda Ramsey, Erica LeMon, Corine Mullings, Cathy Meyers, Veto Mentzell, Sheree Keitt, Maura Dwyer, and Claudia Remington.
- The many other partners, stakeholders, and citizens who contribute to moving SCCAN recommendations and Maryland Essentials for Childhood efforts forward.

Annapolis, Maryland 21401-1991

Re: Family – General Article, Annotated Code of Maryland, § 5-7A-09, State Council on Child Abuse and Neglect (SCCAN) Final Report for 2017

Dear Governor Hogan, President Miller and Speaker Jones:

I would like to begin with a heartfelt word of thanks for your support of several State Council on Child Abuse and Neglect (SCCAN) legislative initiatives during the 2018-2019 Maryland State legislative sessions. With your support, three SCCAN recommendations became bills that passed unanimously in both the Maryland State Senate and House of Delegates. House Bill 1582 passed in 2018 and the Department of Human Services, Social Services Administration recently hired the Medical Director for Child Welfare required by that bill. It will also require the development of an electronic health passport to enable better sharing for health information for children placed in foster care. House Bill 1072, also passed in 2018, requires that all school personnel receive education on preventing and identifying child sexual abuse, including identifying grooming behavior toward children. Building upon the foundation of HB 1072, HB 486/SB 541 passed both

Houses unanimously, was signed by the Governor, and will prevent school employees with a track record of disregarding laws, policies, and codes of conduct related to sexual abuse and sexual misconduct from being passed from one school to another without consequence or question by:

- 1) Requiring anyone applying for a position in a school—public or private—involving direct contact with minors to provide a written release and a statement disclosing whether s/he has been the subject of a child sexual abuse or sexual misconduct investigation by any employer, and whether s/he has ever resigned or separated from a position amid pending allegations of child sexual abuse or misconduct.
- 2) Requiring the school considering the applicant to contact each of the applicant's former employers and inquire whether the applicant has been investigated for child sexual abuse or sexual misconduct, and whether the applicant resigned or separated from a position amid pending allegations of child sexual abuse or sexual misconduct.
- 3) Requiring all contacted former employers to furnish the requested information.
- 4) Banning non-disclosure agreements in cases involving child sexual abuse or child sexual misconduct;
- 5) Prohibiting schools from expunging data from personnel files in cases of employee sexual abuse or misconduct;
- 6) Providing immunity from civil and criminal liability to former and current employers for providing information or records, including personnel records, in good faith.

Each of these bills will help ensure the health, safety, and well-being of Maryland children.

Pursuant to the requirements of Family Law Article, Annotated Code of Maryland, § 5-7A-09 and the federal Child Abuse Prevention and Treatment Act (CAPTA), I respectfully submit on behalf of the State Council on Child Abuse and Neglect (SCCAN) its unanimously adopted Annual Report. The Council makes recommendations for systems changes and improvements through this report that address its legislative mandates:

- 1) *to “evaluate the extent to which State and local agencies are effectively discharging their child protection responsibilities;”*
- 2) *to “report and make recommendations annually to the Governor and the General Assembly on matters relating to the prevention, detection, prosecution, and treatment of child abuse and neglect, including policy and training needs;”*
- 3) *to “provide for public outreach and comment in order to assess the impact of current procedures and practices upon children and families in the community and in order to meet its obligations;”*
- 4) *to “annually prepare and make available to the public a report containing a summary of its activities;” and,*
- 5) *to “coordinate its activities ... with the State Citizens Review Board for Children, local citizens review panels, and the child fatality review teams in order to avoid unnecessary duplication of effort.”*

As the SCCAN mandates are quite broad, the Council must choose priorities on which to focus each year. For 2018, we have chosen to focus on the primary prevention of child maltreatment,

health care for children involved in the child welfare system, and child abuse and neglect fatalities. On pages 59-67, the Council recommends several actionable steps to improve Maryland's child and family serving systems in order to protect children and to prevent child maltreatment and other Adverse Childhood Experiences (ACEs) *from occurring in the first place*. Specific recommendations are made to prioritize prevention of ACEs, create a Children's Trust & Prevention Fund, coordinate the work of child and family serving systems, pass additional child sexual abuse prevention legislation, prevent child abuse and neglect fatalities, and improve health care for children involved in child welfare. As you read through the Council's report and recommendations, I hope you will see our deep commitment to the healthy growth and development of every child within our state and the primary prevention of child maltreatment and other ACEs. That dedication extends to the relationships and environments of children – their parents, their families, their communities, and their state.

Sincerely,

A handwritten signature in cursive script, appearing to read "Wendy Lane MD".

EXECUTIVE SUMMARY

SCCAN's 2018 Annual Report to the Governor and General Assembly provides a framework for a seismic shift in how we as a state address child abuse and neglect, along with related adverse childhood experiences (ACEs). Child physical, sexual, and emotional abuse and child neglect are traditional foci; to these more obvious forms of abuse, we now add other adverse events shown to disrupt the healthy development of children, including but not limited to parental mental illness, parental substance abuse, domestic violence, parental incarceration, divorce and separation, experiencing racism, witnessing violence, living in an unsafe neighborhood, living in foster care, and peer violence and bullying. Individually and particularly when experienced in combination, these ACEs lead to poor child health and educational outcomes and also reduce public safety and economic productivity at an immense cost to children and taxpayers. We support Governor Hogan's vision of economic opportunity for all of Maryland's children, youth, and families and urge him and the General Assembly to develop and refine policy in ways that leverage the exciting advances in the science of the developing brain, ACEs, and resilience to reach that vision.

SCCAN's recommendations set out specific policies, strategies, and training that build the individual and collective knowledge and skills of Marylanders in our child and family serving agencies and communities to provide the safe, stable and nurturing relationships and environments that children need to grow into healthy and productive citizens. In responding to feedback on prior SCCAN reports, some recommendations are addressed specifically to the Governor, the General Assembly, or one or multiple child and family serving agencies. At the same time, implementation of many of these recommendations will require leadership support and the hard but attainable work of collaboration and coordination across child and adult serving agencies that strive now more than ever to integrate themselves and their missions toward this shared vision.

Building infrastructure to disseminate the science and support collective statewide and community efforts is essential. SCCAN facilitated Maryland's participation in the [U.S. Centers for Disease Control's Essentials for Childhood \(EFC\) Framework Statewide Implementation technical assistance program](#). The Essentials for Childhood program is helping us find ways to promote relationships and environments that help children grow up to be healthy and productive citizens so that *they*, in turn, can build stronger and safer families and communities for *their* children (a multi-generation approach). Maryland Essentials for Childhood includes public and private partners from across the state and receives technical assistance from the U.S. Centers for Disease Control. Participating in this program allows Maryland to learn from national experts and leading states. When people learn about the science of the developing brain, the ACE Study, and theories of resilience, they begin to understand the interconnection of many of the social problems that confront our state; and, begin learning and working together to innovatively solve these problems. SCCAN's Annual Report includes the following:

- A brief background of SCCAN's mandate, focus, and efforts
- An overview of the science of the developing brain, ACEs, and theories about resilience
- A discussion of Maryland data on the magnitude of the problem
- SCCAN & Maryland EFC 2018 Actions & Accomplishments toward Four Strategic Goals
- A description of how brain science can serve as a strong foundation for Governor Hogan's vision of economic opportunity, human capital development, and self-sufficiency, as well as a streamlined and efficient state government that supports the frontline work in local communities and ensures excellent customer service.
- Recommendations to the Governor, the General Assembly, and Agencies.

Key Recommendations for the Governor, the General Assembly, and Agencies¹:

1. Take meaningful action to raise awareness of brain science, adverse childhood experiences (ACEs), resilience, and build community commitment to prevent, reduce, and respond to ACEs by launching an ACEs Initiative similar to former Governor Bill Haslam's [ACEs-Building Strong Brains Tennessee](#), former Wisconsin First Lady Tonette Walker's [Fostering Futures](#), and Governor Carey's Executive Order [Making Delaware a Trauma-Informed State](#). While Governors Haslam and Walker no longer hold office, their legacies live on in the communities and agencies across their states.
2. Review Maryland's 2015 baseline ACE Module Behavioral Risk Factor Surveillance System (BRFSS) data (pp. 21-35 below) and 2018 BRFSS data when released in July 2019 and continue to collect BRFSS ACE data every three years.
3. Review Maryland's Youth Risk Behavior Survey (YRBS) data collected in 2018 that is expected to be available in mid-October 2019.
4. Begin collecting resilience data in the BRFSS (as is being done in Wisconsin) and the YRBS in order to both understand the magnitude of this public health epidemic and to develop policy solutions to reduce the numbers and impact of ACEs.
5. Embed the science of the developing brain, ACEs, and resilience into the Children's Cabinet Three-Year Plan. Start by providing ACE training to all Children's Cabinet members. When creating future plans, consider how each recommendation might reduce ACEs or their impact, and improve child, family, organizational, and community resilience.
6. Offer free screenings and time to view the film [RESILIENCE: The Biology of Stress & The Science of Hope](#) to introduce staff from all state agencies to the brain science, ACEs and resilience, including the importance of trauma-informed systems. Provide opportunity for dialogue on how it might be used to provide better customer service within child and family serving agencies.
7. As the next level of the Governor's G.O.L.D. Standard Customer Service Training Initiative, offer ACEs Interface trainings (brain science, ACEs, resilience) to all state employees who work with the public; begin with leadership and supervisors.
8. Explore ways to increase awareness of the brain science and the impact of ACEs on the people your agency serves. Integrate the science into agency and cross agency work by:
 - Partnering in Maryland Essentials for Childhood Initiative to ensure cross-agency coordination
 - Considering the appropriateness of screening clients for ACEs and resilience factors
 - Providing pre-service and in-service training to all staff on brain science, ACEs and resilience
 - Identifying a standard of care that includes assessing for and responding to ACEs, to be integrated into contracts as performance measures
 - Embedding the science into strategic planning with local agencies and connect to funding
 - Ensuring organizational policies and regulations reflect the science
 - Ensuring practice models reflect the science

¹ A comprehensive list of SCCAN Recommendations by Agent/Agency begins at page 52-62.

- Investing resources in evidence-based trauma interventions and creating a trauma-informed agency
 - Using communication efforts to connect the dots between state child and family serving programs as a response to the science. Developing an umbrella message and integrating it into messaging across agencies and programs, including the message on websites and press releases about child and family serving policies and programs.
9. Establish a robust Children's/ACEs Trust and Prevention Fund.
 10. Pass legislation providing for Paid Family Leave.
 11. Pass legislation eliminating the civil statute of limitations for child sexual abuse, including a two year look-back window or "window of justice" to expose hidden predators.
 12. Pass legislation that requires all public and nonpublic schools and their contracting agencies to do CPS background checks on all applicants for positions involving direct contact with minors.
 13. Pass legislation requiring state and local child and youth serving agencies, and child and youth serving organizations receiving state funding to institute Comprehensive Child Sexual Abuse training, policies, and guidelines.
 14. Establish an ongoing Child Welfare Health Coordination Expert Panel led by the Child Welfare Medical Director to ensure communication and coordination between the multiple agencies that provide health services to children with the child welfare system.

BACKGROUND

SCCAN has its historical origins in the 1983 Governor's Task Force on Child Abuse and Neglect, appointed at the request of the General Assembly. The Task Force "found that child abuse, especially sexual abuse was far more widespread than originally estimated; [and,] the problems of child abuse and neglect require long term efforts for the implementation and monitoring of programs for the prevention, detection, and treatment of victims and offenders." In light of the task force findings, on April 29, 1986, the task force became the Governor's Council on Child Abuse and Neglect created by Executive Order. In 1999, the Maryland General Assembly established The State Council on Child Abuse and Neglect (SCCAN) as one of three citizen review panels² required by the Federal Child Abuse Prevention and Treatment Act (Title 42, Chapter 67, Subchapter I), known familiarly as CAPTA, and elaborated on its Federal responsibilities in the Maryland Family Law Article, Section 5-7A.

SCCAN consists of up to twenty-three members, most of whom are private citizens appointed by the Governor of Maryland, including representatives from the Maryland Chapter of the American Academy of Pediatrics, professional and advocacy groups, private social service agencies, and the medical, law enforcement, education, and religious communities. At least two members must have personal experience with child abuse and neglect within their own families or have been clients of the child protective services system. Eight members of SCCAN are designated representatives of their respective organizations including: the Maryland Senate, Maryland House of Delegates, Department of Human Services, Department of Health, Department of Education, Department of Juvenile Services, Judicial Branch, and the State's Attorneys' Association.³

SCCAN's mandate is defined in Federal and State law. CAPTA charges SCCAN and all citizen review panels "to evaluate the extent to which State and local agencies are effectively discharging their child protection responsibilities"⁴ and to "provide for public outreach and comment in order to assess the impact of current procedures and practices upon children and families in the community and in order to meet its obligations."⁵ The Maryland Family Law Article reiterates the CAPTA requirements and specifically charges SCCAN to "report and make recommendations annually to the Governor and the General Assembly on matters relating to the prevention, detection, prosecution, and treatment of child abuse and neglect, including policy and training needs".⁶

Prevention as a priority

For over a decade, the Council has focused its research, advocacy, and collective energies on activities to raise awareness of the science of the developing brain and adverse childhood experiences (ACEs) and build cross-sector collaboration to advocate for systems reform to promote child well-being and prevent child maltreatment and other adverse childhood experiences (ACEs) *before they occur. The profound impact that child maltreatment and other (ACEs) have on a child's well-being-- including short and long-term health, behavior and development; school success; future employment and earning potential; ability to form positive, lasting relationships and become productive citizens-- is well documented.* Historically, most

² The other panels are the Citizens' Review Board for Children and the State Child Fatality Review Team.

³ See Appendix D for current members.

⁴ Section 5016a (c) (4) (A)

⁵ Section 5016a (c) (4) (C)

⁶ Section 5-7-09A (a)

national, state, and local funding streams and responses to the problem of child maltreatment are directed at a case-by-case approach to detecting, investigating, prosecuting, and providing CPS or court supervised services to the “perpetrators” of abuse and neglect and to protecting children who have already been abused or neglected from future abuse and neglect by providing services to families or placing children in foster care. In describing our current “casework approach” and “criminal justice approach” to solving the problem of child maltreatment and other ACEs (parental: substance abuse, mental illness, domestic violence, separation/divorce, and incarceration), one of the principal investigators of the Adverse Childhood Experiences Study (ACEs), Robert Anda, M.D. aptly noted:

“Our society has treated the abuse, maltreatment, violence, and chaotic experiences of our children as an oddity that is adequately dealt with by emergency response systems—child protective services, criminal justice, foster care, and alternative schools—to name a few. These services are needed and are worthy of support—but they are a dressing on a greater wound. [We continue to buy] into a set of misconceptions. Here are a few: [Child maltreatment and other] ACEs are rare and they happen somewhere else. They are perpetrated by monsters. Some, or maybe most, children can escape unscathed, or if not, they can be rescued and healed by emergency response systems. Then these children vanish from view... and randomly reappear—as if they are new entities—in all of [our] service systems later in childhood, adolescence, and adulthood as clients with behavioral, learning, social, criminal, and chronic health problems.”

A broader public health approach is needed to prevent child maltreatment *before it occurs*. The public health approach extends our criminal justice and case-based approaches by fostering a better understanding of the complex causes of child maltreatment in order to more effectively and preemptively intervene at all levels of the socio-ecological model (individual, family, community, and societal). Current prevention programs, policies, and practices in Maryland are fragmented across public and private agencies; and, vary both qualitatively and quantitatively from jurisdiction to jurisdiction. While many states, including Tennessee, Wisconsin, Iowa, Minnesota, Washington, Colorado, California, North Carolina, Massachusetts, among others are developing a coordinated approach to addressing childhood adversity and its impacts, **Maryland has no state agency that is specifically mandated to focus on primary prevention of child maltreatment. With the absence of mandated leadership, there is no formal cross-sector statewide strategy for promoting child well-being and preventing child maltreatment and other ACEs before they occur and current prevention efforts are fragmented across agencies.** That is why SCCAN and its partners joined together to form Maryland Essentials for Childhood Initiative, a statewide collective impact⁷ initiative that promotes safe, stable, nurturing relationships and environments for children and prevents, mitigates ACEs, and builds resilience in children, families, and communities.

THE SCIENCE OF THE DEVELOPING BRAIN, ACES & RESILIENCE: A STRONG CASE FOR A PROSPEROUS MARYLAND⁷

1. Healthy Development Builds a Strong Foundation – For Kids and For Society

Preparing Maryland for a prosperous future begins with recognizing that our youngest residents must get what they need today to become the adults who will strengthen our communities and build our economy tomorrow. When Maryland invests wisely in children and families, the next generation will pay that back through a lifetime of productivity and responsible citizenship.

2. Experiences Build Brain Architecture

Fortunately, what our children need is not a mystery. Recent advances in the science of early childhood development tell us that the basic architecture of the human brain is constructed through an ongoing process that begins before birth and continues into adulthood. Like the construction of a home, the building process begins with laying the foundation, framing the rooms and wiring the electrical system in a predictable sequence. Early experiences literally shape how the brain gets built, establishing either a sturdy or a fragile foundation for all of the learning, health and behavior that follows. A strong foundation in the early years increases the probability of positive outcomes. A weak foundation increases the odds of later difficulties. Getting things right early on is easier than trying to fix them later.

3. Serve & Return Interactions Shape Brain Circuitry

The interactive influences of genes and experience shape the developing brain. The active ingredient is the “serve and return” relationships children have with their parents and other caregivers in their family or community. Like the process of serve and return in games such as tennis and volleyball, young children naturally reach out for interaction. This process starts in infancy– with facial expressions and babbling– and continues throughout the early years. If adults do not respond with the same kind of vocalizing and gesturing back to them– or if the responses are unreliable or inappropriate the brain’s architecture does not form as expected. This has negative implications for later learning and behavior. However, when children develop in an environment of relationships that are richly responsive, with back-and-forth interactions, then these brain-building experiences establish a sturdy architecture on which future learning is built.

4. Brains are Built from the Bottom Up, Skills Beget Skills

Just as a rope needs every strand to be strong and flexible, child development requires support and experiences that weave cognitive, emotional, and social capacities together. These capacities are inextricably intertwined throughout the life course. Emotional well-being and social competence provide a strong foundation for budding cognitive abilities, and together they comprise the foundation, the bricks and mortar, of human development. Science therefore directs us away from debating which capacities children need most and toward the realization that they are all intertwined.

⁷ The common language used in this section comes from a combination of sources: Harvard Center for the Developing Child, Frameworks Institute, CDC Essentials for Childhood and Tennessee’s Building Strong Brains: ACEs Initiative.

5. The Biology of Toxic Stress or Adverse Childhood Experiences (ACEs) Derails Healthy Development

Toxic stress or chronic, unrelenting stress in early childhood derails development by permanently setting the body's stress response system in high alert, weakening brain architecture, and impairing the development of all-important executive function skills. In the absence of the buffering protection of adult support, toxic stress becomes built into the body by processes that shape the architecture of the developing brain. These changes can lead to lifelong difficulties in learning, behavior, and physical and mental health.

6. Positive Stress Aids Healthy Development, Toxic Stress Impedes It

Learning to deal with stress is an important part of healthy development. Challenges, like learning to tie their shoes or to get along with new people or in new environments, set off a temporary stress response that helps children be more alert while learning new skills. But truly adverse childhood experiences – severely negative experiences such as the loss of a parent through illness, death or incarceration; the experience of abuse or neglect; or witnessing violence – can lead to a toxic stress response in which the body's stress systems go on “high alert” and stay there. This haywire stress response releases harmful chemicals into the brain that impair cell growth and make it harder for neurons to form healthy connections, damage the brain's developing architecture and increase the probability of poor outcomes. This exaggerated stress response also affects health and is linked to chronic physical diseases, such as heart disease and diabetes.

7. The Presence of Responsive Adults at Home & in the Community Lessens the Impact of Toxic Stress

Science tells us that many children's futures are undermined when stress damages the early brain architecture. The good news is that potentially toxic stressors can be made tolerable if children have access to stable, responsive adults – home visitors, child care providers, teachers, coaches, mentors. The presence of good serve-and-return acts as a physical buffer that lessens the biological impact of severe stress.

Communities play a big role in supporting a child's healthy development and buffering the impact of abuse, neglect, or other ACEs. A child's well-being is like a scale with two sides; one end can get loaded with positive experiences, while the other end can get loaded with negative experiences. Supportive relationships with adults, sound nutrition, and quality early learning are all stacked on the positive side. Stressors such as abuse, witnessing violence, neglect or other forms of toxic stress are stacked on the other. This dynamic system shows us two ways we can achieve positive child outcomes: to tip to the positive side, we can pile on the positive experiences, or we can offload (or prevent) weights from the negative side. Children who have experienced several ACEs are carrying a heavy negative load. Innovative states and communities design high-quality programs for children to prevent Adverse Childhood Experiences from occurring in the first place and to effectively respond to adverse events with strong, nurturing supports to ameliorate their impacts when they can't be prevented. These programs have solved problems in early childhood development and shown significant long-term improvement for children.

8. Childhood Experiences Build the Foundation for a Skilled Workforce, a Responsible Community & a Thriving Economy: Executive Function & Self-Regulation Skills are Critical for Learning & for Life

Science has identified a set of skills that are essential for school achievement, positive behavior, good relationships, preparation and adaptability of our future workforce, and avoiding a wide range of health and relational problems. In the brain, the ability to hold onto and work with information, focus thinking, filter distractions, and switch gears is like an air traffic control system to manage the arrivals and departures of dozens of planes on multiple runways. Scientists refer to these capabilities as executive function and self-regulation— a set of skills that relies on three types of brain function: working memory, mental flexibility, and self-control.

9. These Essential “Air Traffic Control Skills” are Built in Relationships and the Places in which Children Live, Learn, and Play

Children are not born with these skills; they are born with the ability to develop them. These skills begin to develop in early childhood and mature through early adulthood. The quality of interactions and experiences provided in our families and communities either strengthens or undermines these budding skills.

10. Rethinking Our Policies

As Marylanders understand the impact of Adverse Childhood Experiences, they will realize that the future economic development and prosperity of the state depends on rethinking our policies in health, education, public safety, justice, public assistance, child welfare, and juvenile justice. Focusing on building healthy brain architecture for every child and coordinating our efforts across all our child and family serving systems will prove to be key. This shift in our focus will considerably *reduce childhood adversity at a population level* and stem the tide of ever-more-costly social problems.

We should focus on preventing these ACEs whenever possible and on wrapping services around children, families, and communities when they can't be prevented. This requires strong collaboration across disciplines, departments, agencies, and communities with a focus on the infrastructure of services and supports that make a difference. With coordinated efforts focused on related topics, including child abuse and domestic violence prevention, home visiting, mental health and substance abuse services for parents, and a variety of other early intervention services and supports we can achieve a comprehensive and transformative preventive system that improves child development. This kind of sound investment in our society's future is confirmed by brain science. It improves outcomes for children now, and is a significant foundation for solutions to many of the long-standing and nagging challenges we face as a state in our health, mental health, social services, child protection, criminal and juvenile justice systems.

All children and parents (especially those with high ACE scores) need someone in their corner. The shift from “What is wrong with you, or why are you a problem?” to “What has happened to you, and how can we support you and help you heal from these experiences?” will result in a more effective, more empathetic service delivery system and a healthier, socially and economically stronger Maryland.

MAGNITUDE OF THE PROBLEM IN MARYLAND

Important to addressing any problem is understanding of its scope. There is considerable need for improvement in providing comprehensive data and analysis of childhood adversity for both individual case determinations and systems improvement decision-making. In 2016, the Council and its' partners supported the Governor's supplemental budget request to create a shared services platform into which all the human service agencies could integrate their data systems. The proposal also provided for replacing the three legacy data systems within DHS – CARES (for public assistance); CSES (for child support enforcement); and MD CHESSIE (for child welfare). The Council and partners are hopeful that this ground-breaking project, MD THINK, will bring needed accuracy, efficiency, data analysis capabilities, and tracking of critical outcomes for children across child and family serving agencies. Many key data points are either not regularly and systematically collected or are not readily accessible and therefore not analyzed (e.g., ACEs of children involved in child welfare: parental substance abuse, parental incarceration, parental mental illness within child welfare). *We hope that MD THINK will provide critical technology to give us a clearer picture of not only how well children are doing within the child welfare system, but how those same children and families are faring in sister child and adult serving systems and across Maryland.*

CPS reports are known to underestimate the true occurrence of maltreatment. Non-CPS studies estimate that 1 in 4 U.S. children experience some form of child maltreatment in their lifetimes.⁸ It is important to look at multiple sources of data to understand the true scope of the problem. To give the reader some perspective on the problem in Maryland, the Council considers data from two Maryland sources below: Maryland CPS Data (incidence) and Behavioral Risk Factor Surveillance System ACE Module data (retrospective prevalence).

CHILD WELFARE DATA, CHILD ABUSE AND NEGLECT REPORTS, PATHWAYS & SERVICES PROVISION

Figure A illustrates the number of referrals (alleging suspected maltreatment), reports (screened-in referrals), their pathways (investigation or alternative response, risk of harm), dispositions, and service provision.

- During FFY 2017, DHS SSA reports that it received 67,467 referrals of suspected child abuse or neglect, up from 49,919 referrals in 2016. Of those, 27,768 reports or 42.2% were screened in for a CPS response (either investigative or alternative response).
- During FFY 2017, 13,823 investigations were completed. Of this total, 5,831 were indicated for abuse or neglect (or 42.2%, a 14.5% increase in indicated cases from 2016). The 5,831 indicated cases represent 8.6% of the total abuse and neglect reports. Once there is an indicated referral, children are considered victims of child abuse/neglect.⁹
- During FFY 2017, 8,426 screened-in reports (12.5% of total reports down from 36.5% of total reports in 2016) received an alternative response. Of those 8,426 cases, 464 received services and 93 cases ended up with a removal.

⁸ Finkelhor D, Turner HA, Ormond R, Hamby SL. Violence, crime, and abuse exposure in a national sample of children and youth: an update. *JAMA Pediatr* 2013; 167(7):614-621. doi:10.1001/jamapediatrics.2013.42.

⁹ In one report of child abuse and neglect, there may be multiple case types (physical abuse, neglect, sexual abuse, mental injury), as well as multiple victims and maltreators. As a result, one report may have multiple findings for multiple victims. For instance, one report may indicate physical abuse but rule out neglect on one child and indicate physical abuse and neglect on another child. This results in multiple findings per report.

- Data was not readily available to indicate what, if any, services were offered to and accepted by children and their families. This is unfortunate as many of the children referred to child welfare experience significant risk factors (multiple types of maltreatment, parental mental illness, substance abuse, incarceration, domestic violence) that result in poor short and long-term outcomes. ***It is unclear from available data the extent to which children and families are not only referred for services, but linked and provided those services.***
- Of particular concern to both SCCAN and the Citizen's Review Board for Children is the absence of data to verify the extent to which children are receiving necessary health and mental health services and care coordination. Lack of accurate tracking and reporting of these services and their outcomes is particularly troubling as children involved with child welfare face complex challenges of chronic and extreme stress that threaten their long-term health and well-being.

Children who experience abuse or neglect have abnormally high levels of cortisol, a hormone associated with the stress response, even after they are removed from maltreating caregivers and placed in safe circumstances. Such continuously high cortisol levels adversely affect stress responsiveness, emotion, and memory.¹⁰ Studies have also shown that heightened stress impairs the development of the prefrontal cortex, the brain region that is critical for the emergence of abilities that are essential to “autonomous functioning and engagement in relationships.”¹¹ These “executive functions” include planning, focusing, self-regulation, and decision-making. Executive functions are necessary to successfully managing school, work, and healthy relationships.¹²

Data from SCCAN's 2013-2017 Annual Reports emphasized the importance of tracking health services and outcomes for children involved with child welfare. Gathering and analyzing this data should be a high priority for ensuring our state's appropriate care of these our *most* vulnerable children. Because children and families involved in child welfare are often involved in multiple public systems – public health, behavioral health, primary care, Medicaid, child welfare, criminal and juvenile justice, education, public assistance, and child support enforcement—it is **essential that these systems work in unison and share data effectively to meet these children's health care needs.** Brain science and the ACE Study indicate that leaving these needs unmet leads to poor behavioral, health, educational, employment, and relational outcomes in the future.

Memorandum, ACYC-CB-IM-12-04. April 17, 2012, p. 4.

Figure A: 2017 CHILD MALTREATMENT REFERRALS, PATHWAYS, & SERVICES

Child Maltreatment by Type:

- Neglect is the largest category of child abuse/neglect at 63% percent, followed by physical abuse at 26%, sexual abuse at 11% and mental injury at 0%. See Figure B below.
- Chronic neglect is given less attention in policy and practice, however can be associated with a wider range of damage than physical or sexual abuse. Science tells us that young children are especially vulnerable to poor physical and mental health outcomes of neglect. A broad range of developmental impairments can occur, including cognitive delays, stunting of physical growth, impairments in executive function and self-regulation skills, and disruptions of the body's stress response.¹³

Caregiver Risk Factors for Child Maltreatment:

Caregiver risk factors are characteristics of a caregiver that may increase the likelihood that their children will be victims of abuse and neglect. Parental drug and alcohol abuse is a documented risk factor. However, the extent of the problem in Maryland is challenging to ascertain because different data sources provide very different statistics. The U.S. Department of Health and Human Services, Administration for Children and Families *Child Maltreatment 2017* indicates that 5.1% of child maltreatment victims (i.e. cases with an indicated finding) in Maryland had a caregiver with substance abuse and 2% had a caregiver with alcohol as a factor.¹⁴ Maryland data for this document is obtained from the Maryland Department of Human Services. These numbers are significantly smaller than the numbers in most other states (victims with alcohol abuse caregiver factor varies from 49.3% in Oregon to Maryland's 2%; victims with substance abuse caregiver factor varies from 66.1 in New Mexico to Maryland's 5.1 and Oregon's 3.5). In contrast, the data DHS collected for Maryland's IV-E Waiver indicates that parental substance abuse was a factor in the removal decision for 29% of all children removed from their homes in FY 2012-2014,¹⁵ and Maryland BRFSS data indicate that 27% of adults lived with someone with substance abuse problems when they were growing up.

¹³ [In Brief, The Science of Neglect](#), Harvard Center on the Developing Child.

¹⁴ U.S. Department of Health & Human Services, Administration for Children and Families, Administration on Children, Youth and Families, Children's Bureau (2018), *Child Maltreatment 2017*; <https://www.acf.hhs.gov/sites/default/files/cb/cm2017.pdf>

¹⁵ <http://www.dhr.state.md.us/blog/wp-content/uploads/2015/01/MARYLAND-data-packet-3-6-15.pdf>, p. 10.

Knowledge and experience of SCCAN members suggest that 5.1% and 2% is a huge underestimate of the burden, and the other data sources are more accurate. There are also concerns regarding the accuracy of the data for two other key child maltreatment risk factors, Domestic Violence and Financial Problems. Both NCANDS and ACE data identify similar rates of IPV exposure of 16.7% and 17.3%, respectively. However, there were significant drops in caregiver risk factors of IPV and Financial Problems, down from 38.1 and 39.6 respectively.

Risk Factors Among Maryland Children with an Indicated Maltreatment Finding (from NCANDS data):

- 16.7% of child victims had a caregiver risk factor for domestic violence
- 2% of child victims had a caregiver risk factor for alcohol abuse
- 5.1% of child victims had a caregiver risk factor for drug abuse
- 16.3% of child victims had a caregiver risk factor for financial problems

Given the strong likelihood that NCANDS data – obtained from DHS child welfare data – grossly underestimates the risk of parental substance abuse, we are concerned that parental risk factors may not be accurately identified by trained child welfare workers, and therefore can go undocumented in child welfare data systems. It is also possible that child welfare workers are identifying parental risk factors, but this information never gets recorded in the CHESIE database.

Child Abuse & Neglect Fatalities as Reported by DHS:

- In FFY 2018, DHS reported to NCANDs that at least 34 Maryland children had died with child maltreatment as a contributing factor. This was an increase from 32 the prior year and 28 the year before. It was reported that of those 34 children, 4 of the children's family had received Family Preservation Services within the previous 5 years. One child was removed from his/her family within the previous 5 years.
- Seventeen (50.0%) of child deaths were < 1 years old; 8 (23.5%) were 1-3 years old; and 9 (26.5%) were between 6-17 years old. Twenty children (58.8%) of children were African American; 3 children (8.8%) were Asian; 7 children (20.6%) were Caucasian; and 4 children (11.8%) were of unknown race.
- In FFY 2018, DHS reported that there were 19 serious physical injuries (SPIs) with child maltreatment as a contributing factor. Thirteen of the SPIs were of children <1-year-old; 5 were 1-3 years old; and 1 was 6-10 years old. Nine of the 19 SPIs had an active case or prior child welfare case which had been closed within the past 12 months.
- Of the SPI cases, 9 were African American; 2 were bi-racial; 3 were Caucasian; 0 were Hispanic; and 5 were of unknown race.

Maryland Child Abuse & Neglect Fatality (MCANF) Review:

The Maryland Child Abuse and Neglect Fatality (MCANF) Workgroup is a joint effort of the State Council on Child Abuse & Neglect (SCCAN), the State Child Fatality Review Team (CFRT), and the Citizens Review Board for Children (CRBC). The effort grew out of a review by SCCAN of the National Commission to Eliminate Child Abuse & Neglect Fatalities Report, [Within Our Reach: A National Strategy to Eliminate Child Abuse and Neglect Fatalities](#) and [fact sheet](#) with its findings and recommendations published in March 2016. SCCAN, CFRT, and CRBC are Maryland's three Child Abuse Prevention and Treatment Act (CAPTA) citizen review panels mandated by federal and state law to examine policies, practices, and procedures of the state and local agencies responsible for child protection, including specific cases. The panels make recommendations for improving child and family serving systems annually to the Governor and General Assembly. The purpose and focus of the MCANF Workgroup is to:

- Review the multiple agency processes in place throughout Maryland to identify, report, respond to and prevent child fatalities and near fatalities related to child abuse and neglect.
- Review Maryland's unexpected/unexplained child deaths under the age of 5 from CY2015, as most child abuse and neglect fatalities and near fatalities in Maryland (and throughout the country) occur to children under 5 years of age.
- Compile accurate, cross-system, aggregate data to develop an understanding of the root causes (i.e., risk factors such as parental substance abuse, domestic violence, mental illness, etc.) of these fatalities.
- Make recommendations to link the data and its analysis to implementation of improved policies, programs, practices and training within *all* child and family serving agencies (OBs, hospitals, pediatricians, WIC, Early Care and Learning, parental mental health and substance abuse services, law enforcement, CPS, schools, etc.) to prevent child abuse and neglect and the related fatalities and near fatalities.

In July 2016, Maryland began participation in the Three Branches Institute on Improving Child Safety and Preventing Child Fatalities. SCCAN and SCFRT are participants in that work which is now being organized under the Family Blossoms reorganization at DHS, SSA, sharing information about fatality review processes in Maryland and the current reviews of the MCANF Workgroup.

As most child abuse and neglect fatalities and near fatalities in Maryland and throughout the country occur to children *under* 5 years of age, the Workgroup is focusing on reviewing all “unusual and unexpected” fatalities statewide of 0-4 year olds in CY2015 to determine: 1) whether or not the death was related to abuse and neglect and 2) what systems improvement recommendations could prevent future deaths. The state-level review was completed in May 2019 and the data, findings, and recommendations are anticipated to be available by October 2019. MCANF has completed reviewing all child fatalities in most jurisdictions and has made the following preliminary observations:

- Child victims were primarily infants and toddlers.
- Many of the deaths were sleep-related, though frequently other family and community risk factors were also present.
- Based on the available data, many of the children and their caregivers had high ACE scores (parental involvement as a child in child welfare, juvenile justice, corrections, and school dropout and failure) and parents were struggling with substance use, mental health disorders, and intimate partner violence.
- While mothers may have had prior parenting services, i.e., infant safe sleep, home visiting, etc., the fathers and/or partners who were caregivers when the children died often had not been offered nor received these services.
- Most of the children and families had not had prior CPS contact¹⁶, although the parents may have been involved in child welfare as children themselves.
- The majority of families had been in contact with multiple non-CPS systems, including: Temporary Cash Assistance (TCA), Medical Assistance (MA), Health Care Access Maryland (HCAM), SNAP, WIC, and/or substance abuse and mental health treatment within the 12 months prior to the child's death.
- Lack of safe child care options was identified as an issue in a number of cases.

¹⁶ Until October 1, 2016, Maryland law required all records of CPS “screened out” reports, as well as all records of investigations in which abuse and neglect was ruled out, to be expunged within 120 days.

COLLECTING ACE DATA IN MARYLAND:

Background: The Adverse Childhood Experiences Study

The ACE Study examines the social, behavioral and health consequences of adverse childhood experiences throughout the lifespan. ACE Study participants (17,337) were members of Kaiser Permanente Medical Care Program in San Diego, California and reflected a cross-section of middle-class American adults. The study is an ongoing collaboration between Kaiser Permanente and the Centers for Disease Control and Prevention (CDC) that began with two-waves of participants beginning in 1995 and 1997. Participants were asked questions regarding ten adverse childhood experiences which included all forms of child maltreatment and five indicators of family dysfunction: substance abuse, parental separation/divorce, mental illness, domestic violence, and/or criminal behavior within the household.

KEY FINDINGS of the ACEs Study published in peer-reviewed scientific journals*:

- **ACEs are COMMON:** Two thirds of study participants reported having at least one ACE. More than one fifth reported having three or more ACEs.

CHILD ABUSE & NEGLECT		FAMILY DYSFUNCTION	
TYPE	% within population	TYPE	% within population
Physical Abuse	28 %	Substance Abuse	27 %
Sexual Abuse	21 %	Parental Separation/Divorce	23 %
Emotional Neglect	15 %	Mental Illness	17 %
Psychological Abuse	11 %	Battered Mother	13 %
Physical Neglect	10 %	Criminal Behavior	6 %

- **ACEs are RARELY FOUND IN ISOLATION/ACEs TEND TO OCCUR IN CLUSTERS:** The cumulative impact of ACEs is captured in the “ACE Score.” If an individual has experienced one ACE, they are likely to have multiple. An individual’s ACE score likely captures the neuro-developmental consequences of traumatic stress.

ACE SCORE	PREVALENCE
0	33 %
1	26 %
2	16 %
3	10 %
4 or More	16 %

- **ACEs are *STRONG DETERMINANTS OF ADOLESCENT & ADULT SOCIAL WELL-BEING & HEALTH*:** ACE-related problems have a strong, graded relationship to numerous health, learning, social and behavioral problems *throughout a person's lifespan*. As the number of ACEs increase in the life of an individual, there is an increased likelihood of the following risky behaviors and chronic physical and mental health conditions

BEHAVIORS	PHYSICAL & MENTAL HEALTH
SMOKING	SEVERE OBESITY
ALCOHOL ABUSE	DIABETES
DRUG USE (ILLICIT & PRESCRIPTION)	DEPRESSION
MISSED WORK & PERFORMANCE IN THE WORKFORCE	SUICIDE
LACK OF PHYSICAL ACTIVITY	HIV & STDs
RISKY SEXUAL BEHAVIOR	HEART DISEASE

Collecting ACE Data through the Behavioral Risk Factor Surveillance System (BRFSS) and Youth Risk Behavior Surveillance System (YRBSS)

The Behavioral Risk Factor Surveillance System (BRFSS) is a CDC supported, state-administered random-digit-dial (landline and cell phone) survey conducted in all 50 states, the District of Columbia, and three U.S. territories that collects data from non-institutionalized adults regarding health conditions and risk factors. The purpose of the BRFSS is to assess the population prevalence of chronic health conditions, risk factors, and the use of preventative services.

Since 2009, states have been collecting ACEs data through their BRFSS. In 2013, SCCAN recommended adding the ACEs module to Maryland's BRFSS and successfully advocated in 2014 for inclusion of the module in the 2015 BRFSS. The BRFSS ACE module collects data on eight of the original ten ACEs, and excludes physical and emotional neglect. Maryland BRFSS surveyed 12,000 non-institutionalized adults aged 18+ in 2015. Six thousand of those surveyed were administered the ACE module.

Forty-two states and D.C. have collected at least one year of ACE data to serve as baseline data to measure population-level prevalence over time. From 2015 and 2018 Maryland ACE BRFSS data, we hope to learn about the prevalence of ACEs in Maryland, populations most at risk by demographic characteristics, prevalence of ACEs by risk factors/health behaviors, and the prevalence of ACEs by health outcomes. 2018 ACE data is expected to be available in July 2019.

Maryland ACE YRBS Questions:

In 2018 Maryland became one of two states (along with New Hampshire) to begin collecting ACE data through the Youth Risk Behavior Surveillance System (YRBSS). Maryland asked four ACE questions in its' YRBSS survey of middle and high school students.

Emotional abuse	"Does a parent or other adult in your home regularly swear at you, insult you, or put you down?" Response options: Yes, No.
Household Substance Abuse	"Have you ever lived with anyone who was an alcoholic or problem drinker, used illegal street drugs, took prescription drugs to get high, or was a problem gambler?" Response options: Yes, No.
Household Mental Illness	"Have you ever lived with anyone who was depressed, mentally ill, or suicidal?" Response options: Yes, No.
Household Incarceration	"Has anyone in your household ever gone to jail or prison?" Response options: Yes, No.

Maryland BRFSS ACE Questions:

The Maryland BRFSS ACEs module asked the following questions:

Physical Abuse	"Before the age of 18, how often did a parent or adult in your home ever hit, beat, kick or physically hurt you in any way? Do not include spanking." Response options: Never, Once, More than once.
-----------------------	--

Emotional abuse	“Before age 18, how often did a parent or adult in your home ever swear at you, insult you, or put you down?” Response options: Never, Once, More than once.
Sexual abuse	“Before the age of 18, how often did anyone at least 5 years older than you or an adult ever touch you sexually?” “Before the age of 18, how often did anyone at least 5 years older than you or an adult ever try to make you touch them sexually?” or “Before the age of 18, how often did anyone at least 5 years older than you or an adult ever force you to have sex.” For analysis Maryland classified an adult to have been sexually abused if they answered once, or more than once to at least one of these questions Response options: Never, Once, More than once. Responses of “once” or “more than once” to one or more of these questions were classified as sexual abuse.
Household Mental Illness	“Now, looking back before you were 18 years of age, did you live with anyone who was depressed, mentally ill, or suicidal?”
Household Substance Abuse	“Before you were 18 years of age, did you live with anyone who was a problem drinker or alcoholic?” or “Before you were 18 years of age, did you live with anyone who used illegal street drugs or who abused prescription medications?”
Divorce & Separation	“Were your parents separated or divorced?” Response options: Yes, No, Parents not married. Responses of “parents not married” were excluded from analysis due to small numbers (<2% of sample).

Household Incarceration	“Before you were 18 years of age, did you live with anyone who served time or was sentenced to serve time in a prison, jail or correctional facility?”
Witnessing Domestic Violence	“How often did your parents or adults in your home ever slap, hit, kick, punch or beat each other up?” Response options: Never, Once, More than once.

PREVALENCE OF ACEs IN MARYLAND ADULTS:

Maryland collected baseline ACE data in 2015. ACE data from 2018 is anticipated to be released in July 2019. In the 2015 collection, important insights into prevalence of ACEs were gained by examining the following characteristics of those impacted by ACEs:

- Social, Emotional, and Cognitive Impairment
- Adoption of Health-Risk Behaviors
- Disease, Disability, and Social Problems

Limitations to the Data

- BRFSS data does not survey adults living in institutions such as nursing facilities, group homes, or prisons. These populations may be disproportionately affected by ACEs and their exclusion may result in an underestimate of the true prevalence.
- Data does not indicate the severity or frequency of abuse. The data only estimates whether it occurred or did not occur.
- Data does not indicate the temporality of ACEs. The data only estimates that it happened, not when it happened. Because data are cross sectional, we can only say the ACEs happened before the age of 18.
- In some instances the sample size is small. This can increase variance and corresponding confidence intervals, thereby decreasing the precision of estimates. It can also limit the ability to look at prevalence of other state-added questions, such as sexual orientation by abuse type, as this stratification would further reduce the number of individuals in each category, making estimates even less precise.
- Perhaps most importantly, BRFSS data does not indicate causality. We are merely looking at associations, which could be tied to other things such as socio-economic status, for example.

KEY FINDINGS in MARYLAND:

ACEs are COMMON:

Three fifths of the 6000 BRFSS participants who completed the ACE module in Maryland in 2015 reported having at least one ACE at some point during their childhood. Approximately 24%, almost a quarter, reported three or more ACEs.

Prevalence by Type of ACE

CHILD ABUSE & NEGLECT		FAMILY DYSFUNCTION	
TYPE	% within population	TYPE	% within population
Physical Abuse	16.9 %	Substance Abuse	24.9%
Sexual Abuse	11.1 %	Parental Separation/Divorce	27.5 %
Emotional Neglect	Not asked in BRFSS	Mental Illness	15.0%
Emotional Abuse	31.2 %	Intimate Partner Violence	17.4%
Physical Neglect	Not asked in BRFSS	Incarcerated Household Member	7.6%

The percentage of respondents who reported experiencing each of these types of ACEs at least once are indicated in the table above. The types of ACEs with the highest prevalence include “parents who were separated or divorced” and “emotional abuse.” See Figure F below.

ACEs are RARELY FOUND IN ISOLATION– ACEs TEND TO OCCUR IN CLUSTERS:

The cumulative impact of ACEs is captured in the “ACE Score” If an individual has experienced one ACE, they are likely to have multiple. An individual’s ACE score likely captures the neuro-developmental consequences of traumatic stress.

Prevalence by Number of ACEs

As reported in the 2015 Maryland BRFSS, approximately 40% of respondents reported zero ACE exposures, approximately 36 % reported between 1 or 2 ACEs and approximately 24% reported experiencing 3 or more different types of ACEs. For simplicity, we can think of this as no ACE exposure, low ACE exposure, or high ACE exposure. It is important to remember this does not give us information on which ACEs are occurring together.

DEMOGRAPHICS

As age of the respondent increases so does the proportion of respondents who report zero ACEs (blue bars). This indicates that older respondents are reporting ACEs less frequently than younger respondents.

Implications

We can speculate that this could be a result of recall bias or more specifically, that as age increases our recollection decreases. Alternatively, we could hypothesize that younger generations are more aware of ACEs due to current discussions/information sharing about its importance to understanding health, and thus are more likely to report them. This data is interesting, yet we must be careful not to overstate its meaning. It is certainly a possibility that ACEs are becoming more prevalent. However, we need more data to confirm or refute this hypothesis.

Of note, adults who identified themselves as “Asian” were more likely to report 0 ACEs, as compared to all other self-identified race categories. This difference was statistically significant.

Males and females experience a similar proportion of ACE exposures. A higher percentage of women report experiencing 3 or more ACEs, though this difference is not statistically significant.

Adults who report having a less than high school education reported a higher prevalence of 3 or more ACE exposures (33.1%) compared to adults who reported being a college graduate (16.5% reporting 3 or more ACEs). This difference is statistically significant.

Respondents who reported having an income of \$25,000 dollars or less were more likely to report high ACE exposure, as compared to those having an income of \$50,000 dollars or more. This difference is statistically significant.

ACEs are STRONG DETERMINANTS OF ADULT SOCIAL WELL-BEING & HEALTH:

ACE-related problems have a strong, graded relationship to numerous health, learning, social, and behavioral problems *throughout a person's lifespan*. As the number of ACEs increase in the life of an individual, there is an increased likelihood of the following risky behaviors and chronic physical and mental health conditions. Of note, binge drinking data were available from the Maryland BRFSS, but the increase in prevalence of binge drinking from 0 to 3+ ACEs was not statistically significant. Additionally, drug use (illicit and prescription) data was not available in the 2015 Maryland BRFSS.

BEHAVIORS	PHYSICAL & MENTAL HEALTH
SMOKING	DEPRESSION
QUALITY OF LIFE MEASURES	ANXIETY
	DISABILITY
	COGNITIVE DECLINE
	ASTHMA

ACEs and Poor Life Outcomes in Maryland:¹⁷

The ACE Pyramid above is a life course model from pre-conception to death that is designed to understand how adverse childhood experiences (ACEs) influence human development in predictable ways. ***This is important because what is predictable is preventable.*** Prior to the ACE Study, the experts primarily focused on the top three layers of the pyramid: How risk factors lead to disease and early death. Drs. Anda and Felitti, the principal investigators of the ACE study knew that something must be missing – they could see this because health risks are not random, they are concentrated in some populations and not others. People who have one risk tend to have others; that is, they cluster. The ACE Study tested their hypothesis that multiple forms of childhood adversity could be a major determinant of health.

The ACE Study concept is that ACEs disrupt neurodevelopment, which in turn leads to social, emotional, and cognitive adaptations that can then lead to the risk factors for major causes of disease, disability, social problems, and early death. Since the time of the ACE Study, breakthrough research in developmental neuroscience and epigenetics show us that the hypothesis of the ACE Study is biologically sound. Neuroscience and epigenetic discoveries help us to understand the progression of adversity from preconception throughout the life course. Historical trauma and generational adversity increase risk for ACEs, which in turn, generate risk for disease, disability, and social problems.

Social, Emotional, and Cognitive Impairment

Science tells us that when there are no adults to buffer a child from adverse experiences, healthy brain development is disrupted. Moving up to the third tier from the bottom of the ACEs pyramid, the result can be “social, emotional and cognitive impairment.” Maryland BRFS ACE module data has analyzed four indicators of this tier: depression, anxiety, poor mental health days, and cognitive decline.

¹⁷ Centers for Disease Control and Prevention. (2016). Adverse Childhood Experiences (ACE) Study. National Center for Chronic Disease Prevention and Health Promotion. Retrieved from https://www.cdc.gov/violenceprevention/acestudy/ACE_graphics.html.

An explanation of the ACE pyramid as a conceptual <https://www.unmc.edu/bhec/documents/ace-handout-ne-specific.pdf>

There is a strong dose-response relationship¹⁸ when looking at both depression and anxiety in relation to ACEs. As ACE exposure increases, so does the likelihood of depression and anxiety. Adults who report 0 ACEs have the lowest prevalence of depression (8.9%) and anxiety (5%) followed by those who experience 1 to 2 ACEs (16.9 % reported depression and 11.9 % reported anxiety), and finally 3 or more ACEs (35.2% reported depression and 26.8 reported anxiety). These differences are statistically significant.

¹⁸ A dose response relationship is defined as a relationship in which a change in the amount, intensity, or duration of exposure is associated with a change in risk of a specified outcome

When we look at three quality of life measures, including: poor physical health days, poor mental health days, and self-reported health status, there is a dose response relationship between these quality of life measures and ACE exposure. As ACE exposure increases, so does the percentage of adults who report eight or more poor physical and mental health days each month, and poor or fair health status. For poor physical health days, there is a statistically significant difference between those who experience 0 ACEs and 3+ ACEs. For poor mental health days, there is a statistically significant difference between those who experience 0 ACEs, 1-2 ACEs, and 3+ ACEs. There is no significant dose response relationship between ACEs and self-reported health status.

Adoption of Health-Risk Behaviors

The next tier up on the ACEs Pyramid is the adoption of health-risk behaviors. As the number of ACEs goes up, there is a correlation to the adoption of unhealthy behaviors, including smoking, binge drinking and even lack of seat belt use.

There appears to be a dose response relationship between current smoking and number of ACEs. The more ACEs a respondent had, the more likely he or she was to be a current smoker. There was a significant difference in smoking behavior between those individuals with 0 ACEs, those with 1-2 ACEs, and those with 3+ ACEs.

Disease, Disabilities and Social Problems

The next tier on the ACEs Pyramid represents the impact of adverse childhood experiences on disease, disability and social problems of a population.

Adults who report 3 or more aces are more likely to report a disability (29.5%), compared to those who report zero ACE exposures (13.1%). This difference is statistically significant.

There is a dose response relationship between prevalence of asthma and number of ACEs. You can see that adults who report 3 or more ACEs are more likely to report asthma (21.3%), compared to those who report zero ACE exposures (10.1%)

Maryland Department of Health (MDH), Division of Health Promotion Administration will be collaborating with colleagues to conduct a more sophisticated analysis plan of Maryland's ACE data. This may include:

- Adjustment for age, race/ethnicity, income status
- Analysis of chronic disease prevalence by type of ACE (e.g. Household mental illness, Physical abuse)
- Summary of regional or county-level prevalence rates
- Production of a large report or series of data briefs/fact sheets

Conclusions:

What we know so far is that ACEs are common in Maryland and may have pervasive effects on health behaviors and outcomes. Dissemination of this data and implementation of prevention and intervention strategies based on brain science, ACEs, trauma-informed care, and resilience are critical not only to current

child well-being, but health and well-being throughout the lifespan. Unfortunately, childhood trauma is something that we have been reticent to discuss until now. As Jack Shonkoff, Director of the Harvard Center on the Developing Child, so aptly puts it: “A defeatist attitude is completely disconnected from what 21st Century science is telling us and we should be going after that like a bear.” Poor health outcomes/behaviors can be prevented – understanding the relationships between ACEs and health outcomes is one of the first steps in understanding points of intervention/prevention.

SCCAN'S ACTIONS & ACCOMPLISHMENTS 2018

Since 2006, SCCAN has focused its efforts and recommendations on preventing child abuse and neglect *before it occurs* and researching the extent to which the seminal Adverse Childhood Experiences (ACEs) Study is known and being used to inform systemic change in Maryland. In 2012 SCCAN adopted the goals of the *Center for Disease Control and Prevention's state level implementation of Essentials for Childhood* as a framework for its efforts and recommendations, working side-by-side its partners, to create a statewide collective impact initiative to prevent child maltreatment and other ACEs, known as Maryland Essentials for Childhood.

Maryland Essentials for Childhood Initiative:

Maryland Essentials for Childhood (EFC) is a statewide collective impact initiative to prevent child maltreatment and other adverse childhood experiences (ACEs).¹⁹ It promotes relationships and environments that help children grow up to be healthy and productive citizens so that *they*, in turn, can build stronger and safer families and communities for *their* children (a multi-generation approach). Maryland EFC includes public and private partners from across the state and receives technical assistance from the U.S. Centers for Disease Control. The initiative provides members the opportunity to learn from national experts and leading states. Using advances in brain science, epigenetics, ACEs, resilience and principles of collective impact, the EFC leadership and working groups are advancing the following goals:

1. Educate key state leaders, stakeholders, and grassroots on brain science, ACEs, and resilience; in order to, build a commitment to put science into action to reduce ACEs and create safe, stable, and nurturing relationships and environments for all Maryland children.
2. Identify and use Data to inform actions and recommendations for systems improvement
3. Integrate the Science into and across Systems, Services & Programs
4. Integrate the Science into Policy and Financing Solutions

Key Successes of SCCAN & EFC Partners 2018-2019:

SCCAN and Maryland Essentials for Childhood Committee Members have achieved the following goals set out at SCCAN-Maryland Essentials for Childhood Retreat in July 2018:

- Raise awareness of brain science, ACEs and resilience via:
 - ACE Interface Project: trained 30 Master Trainers and 30 Master Presenters in [ACE Interface](#). Between December 2017 and March 2019, ACE Interface Master Trainers have given 108 ACE Interface presentations to 3785 attendees across 17 of Maryland's 24 jurisdictions. Held an ACE Interface Reception for 100+ policy, business, foundation and faith leaders.
 - Resilience Screenings: 40 Screenings & Discussions, 1000+ participants
 - Developed [Maryland ACEs Action](#) blog page on [ACEs Connection](#) by:
 - Recruiting Community Managers for the Maryland ACEs Action page
 - Training Community Managers
 - Tripling Membership

¹⁹ Channeling Change: Making Collective Impact Work, Stanford Social Innovation Review, https://ssir.org/articles/entry/channeling_change_making_collective_impact_work

- Blog posts regarding ACE news and events in Maryland have risen from 4 in the year prior to the start of the ACE Interface Project to 37 posts since Fall 2017.
 - Mapping of ACE trainings on the Maryland ACEs Action Community Tracker
 - Providing access to resources, Maryland BRFSS ACE data by county, ACE events throughout the state, posts by state and local ACE Initiatives, and the ability to request ACE Interface trainings and connect with other Marylanders interested in the science of the developing brain, ACEs, trauma, and resilience.
- Developed a Maryland Essentials for Childhood webpage: <https://mdessentialsforchildhood.org/>.
- Policy & Funding Priorities:
 - Hosted SCCAN-MD Essentials for Childhood Education, Advocacy, & Awards Day at the Maryland General Assembly.
 - The S.E.S.A.M.E. Act - HB 486/ SB 541 passed both chambers of the General Assembly unanimously and was signed by the Governor.
 - \$15 Minimum Wage- HB 16/SB 280 passed both chambers unanimously and became law.
 - Child Advocacy Center Defining Legislation- HB 1007/SB 739 passed both chambers unanimously and was signed by the Governor.
 - Legislation to create a Workgroup to Study Child Custody Court Proceedings Involving Child Abuse or Domestic Violence Allegations- SB 567 passed both Houses unanimously and was signed by Governor. The Governor appointed SCCAN's Executive Director and several Maryland Essentials for Childhood partners and ACE Interface Trainers to the Workgroup
 - While the Trauma-Informed Schools bill HB 256/SB 223 passed the House but died in the Senate Education, Health, & Environmental Affairs Committee, portions of the bill were included in the "Blueprint for Maryland's Future" bill that passed both chambers.
 - Pursuant to HB 1582, a Child Welfare Medical Director was hired by DHS SSA.
- Shared Data:
 - Successfully advocated for the inclusion of 4 ACE questions to be included in the Fall 2018 Youth Risk Behavior Study (YRBS). Following upon the example of Monroe County, New York, Maryland and New Hampshire are the first two states to collect statewide ACE data through their YRBS. Data will be available mid-October 2019.
 - BRFSS ACE data collected in 2018 will be available by July 2019.
 - Completed MCANF Reviews and begun writing draft report on child abuse and neglect related fatalities of children under the age of 5.
- Integrate Science into and across Systems, Services, & Programs:
 - SCCAN and MD Essentials for Childhood Members were instrumental in founding the Infant Mental Health Association of MD-DC. Several SCCAN and MD EFC Members were voted on to the Board of Directors and Executive Committee.
 - Partner in and provide ACE-informed training, support and technical assistance to the Regrounding Our Response Initiative at MDH to address the underlying causes of the opioid epidemic.

Maryland Essentials for Childhood Framework Leads the Work and Progress towards Strategic Goals:

Maryland Essentials for Childhood Initiative uses four strategic goals statewide to create safe, stable, and nurturing relationships and environments that support the healthy development of all Maryland children.

Below is an outline of the four goals and a brief description of key actions taken to achieve each goal.

- I. Raise Awareness and Commitment to promote safe, stable, nurturing relationships and environments, and prevent ACEs.** Educate key state leaders, stakeholders, and grassroots on brain science, ACEs, and resilience in order to build a commitment to put science into action to reduce ACEs and create safe, stable, and nurturing relationships and environments for all Maryland children.

A. ACE Interface Project:

In any great public health discovery, the most important actions in the first decade are:

1. To tell everyone – share the findings effectively and with fidelity, and
2. To change ourselves and promote changes within our spheres of influence.²⁰

With that in mind, SCCAN played a key role in developing the ACE Interface Project, including recruiting members of the inter-professional ACE Interface Master Trainer Cohort and inviting key policy, business, foundation, and faith leaders to the ACE Interface Reception to learn about ACEs and the Maryland Essentials for Childhood Initiative.

The ACE Interface Master Trainer Program was designed by Dr. Robert Anda, the co-principal investigator of the ACE Study, and Laura Porter, to support rapid dissemination of ACE and resilience science, and promote understanding and application of the science to improve health and well-being across the lifespan. In less than a year, the Master Trainer Program enables delivery of ACE information to diverse communities—with fidelity to science and concepts—to tens of thousands of people. Minnesota, Wisconsin, Alaska, Oregon, Montana, South Carolina, and Washington are among the first states to adopt the ACE Interface Master Trainer Program.

Through the generous support of the Board of [The Family Tree](#), the Maryland Essentials for Childhood ACEs Initiative hosted a two-day ACE Interface Master Trainer Session on November 16-17, 2017. This training session was facilitated by Dr. Rob Anda, M.D., M.S., Co-Principal Investigator of the ACE Study, and Laura Porter, who has more than a decade of experience leading successful state-wide implementation of ACE Study concepts. The ACE Interface Project creates a cadre of highly skilled, well-informed trainers and presenters to disseminate the science of the developing brain, ACEs, and resilience and, to spur Maryland policy makers, providers, parents and concerned citizens to innovative action. SCCAN and MD Essentials for Childhood partners identified Master Trainers in each of the child and family serving state agencies (DHS, DJS, MDH, MSDE), as well as multiple sectors (judicial, pediatrics, parent leadership, child care, education, faith-based, law enforcement, evidence-based home visiting, domestic violence, child advocacy centers, child welfare, CASA, business, foundations, mental health, media, and higher education). Each of seven regions of the state have Master Trainers available locally. Master Trainers have committed to educate their local communities and professional colleagues in brain science, ACEs, and resilience. The cohort meets quarterly to share lessons learned, improve skills, and assess the progress of dissemination efforts.

Members of local ACE Initiatives were recruited to take part in the ACE Interface Master Trainer Cohort:

²⁰ <http://www.aceinterface.com/MTE.html>

- Frederick County, Local Health Improvement Plan Committee
- Thriving Communities Collaborative (TCC), Baltimore City
- Harford County ACEs Initiative
- Center for Children, Southern Maryland
- Bester Community of Hope, Washington County

ACE Interface Reception for Key Policy Makers

In addition to the two-day ACE Interface Master Trainer session, the Board of The Family Tree hosted a reception on November 15, 2017 at the Renaissance Fine Arts Gallery. Policy makers, judges, foundation, media, faith-based, and business community leaders received an overview of the ACE Study by Robert Anda and Laura Porter and were introduced to the Maryland's ACE Interface Master Trainer Cohort.

ACE Interface Training Locations by Maryland County

Between December 2017 and April 2019, ACE Interface Master Trainers have given 122 ACE Interface presentations to 4164 attendees across 18 of Maryland's 24 jurisdictions. Calvert, Caroline, Cecil, Queen Anne's, Somerset, and Worcester Counties have yet to be served. They have provided over 31 screenings of *Resilience: The Biology of Stress & The Science of Hope* to more than 565 people. ACE Interface Trainings & Resilience Screenings together provided 153 presentations to 4729 Marylanders. The graphs below show the percentage of trainings by number of people trained and number of trainings per jurisdiction.

B. Facilitated screenings of the newly released documentary [Resilience: The Biology of Stress & The Science of Hope](#) across the state. Since its' debut in April 2017, SCCAN and Maryland Essentials for Childhood's efforts have led to approximately 40 screenings and discussions of Resilience, reaching more than 1000 Marylanders. A sample of screenings that took place included:

- Baltimore Commons Community Gathering, 1st Friday Film, July-November 2017
- GOCCP, Child Advocacy Centers, July 2017
- SCCAN-MD EFC Members, July 2017
- MPH Candidates at the University of Maryland, School of Medicine, July 2017
- Enoch Pratt Branch Managers and Library Community Screenings, October 2017-present
- DHS, Executive Leadership Team, October 2017
- SSA Supervisory Meetings, Social Services Supervisory Staff, October –November 2017
- Maryland Association for the Education of Young Children, August 2017
- Maryland State Child Care Association, October 2017
- Thriving Communities Collaborative Baltimore, February 2018
- Citizens Review Board for Children Board and Volunteer, In-Service Training, October 2017- through April 2018
- Maryland Community Action Partnership Conference, May 2018
- BGE Employee Resource Group, July 2018
- MPH Candidates, University of Maryland, School of Medicine, September 2018
- In-Home Aide Services Program (IHAS) Conference, October 2018

- Maryland Coalition of Families, Family Peer Support Specialists In-Service Training, April 2019

C. Provide introduction to ACEs to fellow State Advisory Councils

- Maryland State Advisory Council on Health and Wellness, January 16, 2019
- Maryland State Council on Cancer Control, May 17, 2019

D. Building and growing membership in the virtual [Maryland ACEs Connection](#) [Community](#) page to connect, inform and support AEs Initiatives across Maryland:

- Developed [Maryland ACEs Action](#) blog page on [ACEs Connection](#). ACEs Connection is “the most active, influential ACEs community in the world.” Its goal is to help community members and professionals stay current with news, research, and events regarding ACEs and trauma-informed/resilience-building practices. Maryland ACEs Action blog page is for anyone who wishes to share information about and promote ACEs research awareness, trauma-informed/resilience-building practices, and to influence positive social change in Maryland. Both ACEs Connection and Maryland ACEs Action are free and open to anyone who wishes to join this virtual community. Additional actions taken for the Maryland site include:
 - Recruited Community Managers for the Maryland ACEs Action page to lead the effort.
 - Trained Community Managers through ACEs Connection.
 - Membership has more than doubled over the year and, increasing the number of Marylanders actively using the site continues to be a goal for MD Essentials for Childhood.
 - Blog posts regarding ACE news and events in Maryland have risen from 4 in the year prior to the start of the ACE Interface Project and recruiting trained Community Managers to 37 posts since November 2017.
 - Created and kept current the Maryland ACEs Action Community Tracker that maps where and to whom ACE Interface and Resilience Screenings have been provided.
 - The site also allows members to learn more about ACE Science and access resources, request ACE Interface trainings, access Maryland BRFSS ACE data by county, keep current with ACE events throughout the state or post events in their community, follow local ACE Initiatives throughout Maryland and connect with other Marylanders interested in the science of the developing brain, ACEs, trauma, and resilience.

E. Development of Maryland Essentials for Childhood Webpage:

- Developed a Maryland Essentials for Childhood webpage to share ongoing information with partners and the public. Additions and improvements will be made to the page as needed.

II. Identify and use Data to inform actions and recommendations for systems improvement.

The goal of the EFC Shared Data & Outcomes Workgroup is to advocate for the Improvement and enhancement of Maryland's data management systems to use common measurements to increase accountability for shared indicators and outcomes for families and children.

A. Successfully organized cross-sector partners to advocate for the inclusion of the ACE

module in Maryland's Behavioral Risk Factor Surveillance Survey in 2015 and 2018 and the Youth Risk Behavior Surveillance Survey in 2018.

Proposed policy: ACE data should be collected as part of BRFSS every three years. Resilience questions²¹ similar to those being asked in Wisconsin's BRFSS should be added to Maryland BRFSS modules.

- The ACEs module was collected in 2 of 3 survey versions in the 2018 Maryland BRFSS. MDH anticipates that about 12,000 Maryland adults will be asked the ACE module by the end of data collection in December 2018. The 2018 ACEs data will be available late summer 2019. While no formal reports have been published by MDH on the Maryland ACEs data, there are data tables which provide prevalence of ACEs by county using the 2015 Maryland BRFSS data available at [Adverse Childhood Experiences in Maryland: Data from the 2015 Maryland BRFSS](#).

B. Successfully organized cross-sector partners to advocate for Maryland to be one of two states to collect ACE data in the 2018 [Maryland's Youth Risk Behavior Survey \(YRBS\)](#) of middle and high school students.

- Maryland collected data on 4 ACE questions (New Hampshire, the other state collecting YRBS ACE data, will collect data on 3 ACE questions) in the fall of 2018. SCCAN and Maryland Essentials for Childhood linked and participated in a call with CDC staff and Maryland YRBS Coordinator to effectuate this change. We also consulted with Christina Bethell, PhD, MPH, MBA at the Child and Adolescent Health Measurement Index (CAHMI) at Johns Hopkins Bloomberg School of Public Health regarding which questions would be most useful to ask in the YRBS.

Proposed policy: Expanded ACE data, including all ten ACE questions, should be collected regularly as part of YRBS and resilience questions²² should be included.

C. Participate in CDC EFC Evaluator technical assistance calls to learn from funded states.

D. SCCAN and Maryland Essentials for Childhood continue to advocate that MDH's Injury and Violence Prevention leadership fund the collection of baseline child maltreatment Awareness, Commitment and Norms Survey data.

Proposed policy: Fund the collection of baseline child maltreatment Awareness, Commitment and Norms Survey data²³ to inform social norms change around child maltreatment and other ACEs.

III. Integrate the Science into and across Systems, Services, and Programs.

The goal of the EFC Systems, Services, and Programs Integration Workgroup is to prevent child maltreatment and other childhood traumas and implement trauma informed policies and practices

²¹ See Appendix B

²² See Appendix C

²³ See Appendix D

throughout public and private organizations and systems. The workgroup has taken the following actions toward this goal:

- A. Recruited ACE Interface Master Trainer Cohort across professions, sectors, and communities to ensure a common language for the integration of ACE science into the systems and networks that serve Maryland children and families.**
- B. Assisted with drafting by-laws and co-founding the Infant Mental Health Association of Maryland and D.C. together with Essentials for Childhood Collective Impact Team partners, in order to promote infant mental health.** The ASSOCIATION promotes healthy social, emotional, cognitive and physical development of infants from pre-conception through early childhood by creating safe, supportive, stable and nurturing relationships and environments. The Association will do this by:
 - Furthering the understanding that infancy is a sensitive period in the development of children
 - Partnering with families
 - Honoring and incorporating the unique needs and preferences of families into available services and, ensuring services are culturally and linguistically responsive
 - Encouraging partnerships with citizens, families, and communities to ensure the optimal development of infants and infant-care giver relationships
 - Facilitating inter-professional cooperation and collaboration
 - Helping to build a competent, collaborative, and trauma-informed cross system work force
 - Developing and supporting communities of care, intervention, and prevention built on strength- based, reflective practice, and family centered policy
 - Expanding education, research, and study of the developing brain during infancy including: the effects of adversity and resilience factors on health and well-being throughout the life span
 - Identifying and enhancing research-informed practices and programs of care, intervention, and prevention
- C. Partnering with the Maryland Department of Health on their Regrounding Our Response Initiative to effectively respond to the opioid crisis by tackling the persistent and ubiquitous misunderstandings, myths, and prejudices that underlie harmful stigma of opioid misuse.**

The curriculum will include five areas, including Adverse Childhood Experiences:

1. Stages of Change training (Center for Community Collaboration) on how behavior changes.
2. Adverse Childhood Experiences (ACE Interface/Maryland Essentials for Childhood) on why people use drugs.
3. Social Determinants of Health (Office of Minority Health) on why inequitable impact.
4. Understanding MAT (Medication-Assisted Treatment) as frontline overdose prevention (BHA/Dr. Olson) on its being the gold standard.
5. Drug User Health Framework (NASTAD - National Alliance of State and Territorial AIDS Directors) on what it means to meet someone “where they are at.”

In its conception, Regrounding Our Response will follow the model SCCAN and MD Essentials for Childhood used to create the ACE Interface Project.

D. Participate in meetings, activities, and/or grant applications of partner organizations:

Resilience Wellness & Prevention Committee; Children's Mental Wellness Campaign; Project LAUNCH State Young Child Wellness Council; Early Childhood Mental Health Steering Committee; Early Childhood Comprehensive Systems; Infant Mental Health Association of Maryland & D.C.; Partnership for a Safer Maryland; Family-Informed Trauma Treatment Center Steering Committee; Maryland Commission on Caregiving; Children's Justice Act Committee; Social Services Administration (SSA) Integrated Practice Model Workgroup; SSA Alternative Response Workgroup; SSA Well-Being Workgroup; and the Social Services Advisory Committee.

IV. Integrate the Science into Policy and Financing Solutions

The goal of the Policy and Financing Solutions Workgroup is to embed and incorporate families and children as priorities in public policies and increase the number and scope of private sector policies and practices that support families and children. The following actions were taken toward those goals:

A. Created Public and Private Sector Policy & Financing Solutions Workgroup

to lead, identify, assess, and advocate for key policies to promote safe, stable, and nurturing relationships and environments for children and to prevent child maltreatment and other ACEs.

B. Reviewed *Exploring policies for the reduction of child physical abuse and neglect*

Joanne Klevens, Sarah Beth L. Barnetta, Curtis Florencea, and DeWayne Moore, Centers for Disease Control and Prevention, Division of Violence Prevention, Atlanta, GA, USA²⁴

C. Hosted SCCAN-MD Essentials for Childhood Education, Advocacy, & Awards Day at the Maryland General Assembly.

Approximately 50 SCCAN and MD EFC Members participated on February 7, 2019. Participants shared the contents of ACE legislative packets with Members of the General Assembly and/or their staff. Delegate Vanessa Atterbeary spoke to the group on the importance of the science and ensuring that this information gets to all of her colleagues. SCCAN-MD Essentials for Childhood Leadership Awards were presented to Delegate C.T. Wilson, Legislator of the Year; Frank J. Kros, MSW, JD, Advocate of the Year; and, The Board & Staff of The Family Tree, Community Partner of the Year.

D. Developed Legislative Packets for ACEs Education and Advocacy Day to Share with General Assembly Members, which included:

- Information about Maryland Essentials for Childhood
- Essential Facts: ACE Science Talking Points Maryland specific ACE data
- Infographics "*Adverse Childhood Experiences: They are More Common Than You Think*" and "*Impact of ACEs on Workforce*"
- An overview of the ACE Study and ACE Prevalence in Maryland
- Examples of six ACE-informed bills before the General Assembly, including talking points:

²⁴ Klevens, J., Barnett, S. B., Florence, C., & Moore, D. (2015). Exploring policies to reduce child physical abuse and neglect. *Child Abuse & Neglect*, 40, 1-11.

SESAME Act, Trauma-Informed Schools Bill, \$15 Minimum Wage Bill, Time to Care Act, Child Advocacy Center Defining Legislation, and TANF Cash Assistance Funding.

E. MD ACE Policy Maker Education Workgroup has begun planning for an ACE Roundtable in the Fall of 2019 to be co-hosted by MD Essentials for Childhood and Key Members of the General Assembly.

- The Workgroup has arranged and participated in calls with states around the country who are leading ACE efforts with their legislatures and Governors. To date there have been calls with California, Alaska, and Delaware.
- SCCAN's Executive Director and Maryland Essentials for Childhood Chair, Joan Stine, also takes part in calls of the Campaign for Trauma Informed Policy and Practice (CTIPP) and has recruited CTIPP's Ex-Officio Legal Advisor, Dan Press, a fellow Marylander to participate in Maryland Essentials for Childhood and the MD ACE Policy Maker Education Workgroup.

F. Developed and/or advocated for the following key legislation to promote safe, stable, and nurturing relationships and environments for children and prevent child maltreatment and other ACEs:

1. **SESAME Act- HB 486/SB 541 passed unanimously and was signed by Governor Hogan.** Helps prevent child sexual abuse & exploitation in schools by eliminating hiring of personnel with prior history of abuse or misconduct. ALL STUDENTS HAVE THE RIGHT TO BE FREE FROM TRAUMA AT SCHOOL, INCLUDING FREEDOM FROM SEXUAL ABUSE AND MISCONDUCT.
2. **Hidden Predator Act -Child Sexual Abuse Civil Statute of Limitations Reform- HB 687 passed the House 135-3, but received an unfavorable report 5-5 in the Senate Judicial Proceedings Committee.** HB 687 would have eliminated the civil statute of limitations for child sexual abuse. Look-back windows in other states have been proven to provide justice to survivors, as well as identifying and prosecuting hidden predators, thus preventing future child sexual abuse by these predators.
3. **Trauma-Informed Schools- HB 256/SB 223 passed unanimously in the House and died in the Senate Health, Education & Environmental Affairs Committee. However, portions of the bill were included in the "Blueprint for Maryland's Future" bill that passed both chambers.** The bill would have established programs and funding to help schools better identify trauma exposure and address its ramifications among students and staff. SCHOOL-BASED PROGRAMS THAT ADDRESS TRAUMA SYMPTOMS IMPROVE EDUCATIONAL OUTCOMES FOR CHILDREN
4. **\$15 Minimum Wage- HB 16/SB 280 passed both Houses unanimously and became law.** Increases Maryland's minimum wage to \$15/hour by 2023. INITIATIVES THAT INCREASE FAMILY INCOME REDUCE RATES OF CHILD MALTREATMENT
5. **2019 Time to Care Act- HB 341/SB 500 died in Economic Matters and Finance Committees.** Provides up to 12-weeks of paid family leave. PAID FAMILY LEAVE IS ASSOCIATED WITH DECREASED INFANT MORTALITY, IMPROVED CHILD HEALTH, IMPROVED PARENT-CHILD BONDING, & REDUCED CHILD MALTREATMENT
6. **Child Advocacy Center Defining Legislation- HB 1007/SB 739 passed both Houses unanimously and was signed by Governor Hogan.** Makes sure that every abused or

victimized child in Maryland has access to an accredited children's advocacy center. CACs are a critical first stop after an allegation of abuse is made. CACs PROVIDE EVIDENCE-BASED, TRAUMA-INFORMED SERVICES THAT HELP CHILDREN COPE WITH AND RECOVER FROM CHILDHOOD TRAUMA.

7. **Temporary Cash Assistance (TCA) Funding- HB 339/SB 456 died in Appropriations and Budget and Taxation Committees.** The bill would have raised TCA from 61 to 71% of the Maryland Minimum Living Level over 5 years. INCREASES IN FAMILY INCOME IMPROVE FAMILY STABILITY, REDUCES FAMILY STRESS, AND MAY PREVENT CHILD NEGLECT.
8. **Workgroup to Study Child Custody Court Proceedings Involving Child Abuse or Domestic Violence Allegations- SB 567 passed both Houses unanimously and was signed by Governor Hogan.** Establishes the Workgroup to Study Child Custody Court Proceedings Involving Child Abuse or Domestic Violence Allegations and requires the Workgroup to study State child custody court proceedings involving child abuse or domestic violence allegations. The Workgroup's role will be to make recommendations about how State courts could incorporate the latest science regarding the safety and well-being of children and other victims of domestic violence into court proceedings. Interim and final reports are due to the Governor and General Assembly by December 1, 2019, and June 1, 2020.

G. Follow Up on Implementation of 2018 Bills Passed:

1. HB 1582-Human Services Children Receiving Child Welfare Services-Centralized Comprehensive Health Care Monitoring Program to Meet the Health Needs of Children involved in the Child Welfare System passed unanimously out of both houses of the General Assembly and was signed into law by Governor Hogan on May 8, 2018. The statute mandates the creation of a Child Welfare Medical Director at DHS and the creation of an electronic health passport for foster youth.
 - SCCAN's Chair, Dr. Wendy Lane, MD, MPH participated in interviewing candidates for the position of a centralized **physician medical director at DHS** to bring clinical and public health expertise to the child welfare system. Dr. David Rose, MD started the position in April 2019.
 - SCCAN's Chair and Executive Director serve on the Health and Education Workgroup of SSA's Families Blossom Initiative and have shared critical data points that should be included in the MD THINK-CJAMS project to help ensure inclusion of data necessary to develop and utilize an **electronic health record** required by HB 1582 for care coordination to:
 - Improve preventive health, and reduce mental health hospitalizations, psychotropic medication use, and unnecessary laboratory testing.
 - Facilitate accurate and up-to-date medical information sharing amongst the child's various care providers/caregivers to prevent fragmented care and medical errors.
2. HB 1072- Child Sexual Abuse Prevention- Instruction & Training:
 - SCCAN has been gathering information to share with county Boards of Education on evidence-informed training to effectively meet the requirements of *annual* instruction and training of *all school employees* on the prevention, identification, and reporting of

child sexual abuse and misconduct that will provide them with the ability to:

- Recognize sexual misconduct in adults
- Recognize, and appropriately respond to sexually inappropriate, coercive, or abusive behaviors among minors
- Recognize behaviors and verbal cues that could indicate a minor has been a victim of child sexual abuse
- Respond to disclosures by minors or their parents or guardians of child sexual abuse or reports of boundary-violating behaviors of adults or minors in a supportive and appropriate manner that meets mandatory reporting requirements under state law.
- SCCAN's Child Sexual Abuse Prevention Workgroup Chair, Elizabeth Letourneau and the Executive Director presented to the Commission on School Construction and have begun to develop the "GUIDELINES AND BEST PRACTICES FOR THE ASSESSMENT AND MODIFICATION OF PHYSICAL FACILITIES AND SPACES TO REDUCE OPPORTUNITIES FOR CHILD SEXUAL ABUSE" required by HB 1072.

H. Developed and Advocated for Policies to Prevent Child Abuse and Neglect Fatalities:

**Key Success- Passage of SB 490- Child Abuse and Neglect- Disclosure of Identifying Information, led by Maryland Essentials for Childhood partner, Advocates for Children and Youth. Other actions included:*

- Reviewed the National Commission of Child Abuse & Neglect Fatalities (CECANF) report [Within Our Reach: A National Strategy to Eliminate Child Abuse and Neglect Fatalities](#) and [fact sheet](#) with its findings and recommendations in April 2016.
- SCCAN and SCFRT members formed a joint workgroup [Maryland Child Abuse & Neglect Fatalities (MCANF)] to review child fatalities related to child maltreatment. Members of CRBC later joined the workgroup.
- As most child abuse and neglect fatalities & near fatalities in Maryland (and throughout the country) occur to children *under 5* years of age, the Workgroup is reviewing all "unusual and unexpected" fatalities statewide of 0-4 year olds in CY2015 to determine: 1) whether or not the death was related to abuse and neglect and 2) what systems improvement recommendations could prevent future deaths. The state-level review will be completed in the Spring of 2019. After completing reviews of all child fatalities in Baltimore City, MCANF has made the following preliminary observations:
 - Child victims are primarily infants and toddlers.
Proposed policy: Screen in all reports to CPS in children under 3 as either an Investigative Response or "Risk of Harm" case and do an in-home assessment of risk.
 - Many of the deaths are sleep-related with additional risk factors present.
 - Based on a review of records, the child and the child's caregivers often had multiple ACEs (involvement as a child in child welfare, juvenile justice, corrections, and school dropout and failure) and many were struggling with substance use, mental health disorders, and intimate partner violence.
Proposed policy: Integrate ACE and resilience screenings into primary care and link parents/caregivers with high ACE scores to supportive services pre and post natally.
Achieved Policy Change: SB 490 amended Maryland's Birth Match law to:
 - expand the scope of the existing law so that birth match is triggered for parents

- who have had their parental rights terminated within the last 10 years rather than 5 years
 - include individuals who have been convicted of murder, attempted murder, and manslaughter of a child
 - require an assessment of the effectiveness of data sharing between DHS SSA and MDH in predicting and preventing child abuse and neglect, including making recommendations on how to better target record-sharing activities.
- While mothers may have had prior parenting services, i.e., infant safe sleep, home visiting, etc., the fathers and/or partners who were caregivers when the children died often had not been offered nor received these services. Recent science emphasizes the need and importance of a new view of fatherhood.²⁵ Based on this science it is critical for the healthy development of our children that we reexamine the way our current child and family serving systems engage, respond to, and encourage participation by fathers.

Proposed policy: Involve fathers and male caregivers in pre-natal, infant safe sleep, home visiting, WIC, child welfare services, etc. as a matter of course. Purposefully recruit fathers as home visitors and other caregiver support roles. Most of the children and families had not had prior CPS contact²⁶, although the parents may have been involved in child welfare as children themselves.
- The majority of families had been in contact with multiple systems: Temporary Cash Assistance (TCA), Medical Assistance (MA), Health Care Access Maryland (HCAM), SNAP, WIC, substance abuse and mental health treatment, within the 12 months prior to the child's death.
- Lack of safe child care options was identified as an issue in a number of cases.

I. Policies that Support Family Economic Stability

- Family-friendly work policies²⁷- There are four key ways for businesses to support early childhood development:
 - Increasing access to quality child care – partially achieved by increasing the child care subsidy (see below – SB 379/HB430)
 - Supporting affordable child care
 - Developing child-friendly policies & procedures
 - Optimizing tax benefits
- Sick Leave-Healthy Working Families Act passed
- Paid Family Leave

²⁵ [Fathers' Roles in the Care and Development of Their Children: The Role of Pediatricians](#) Michael Yogman, MD, Craig F. Garfield, MD, the COMMITTEE ON PSYCHOSOCIAL ASPECTS OF CHILD, FAMILY HEALTH, American Academy of Pediatrics; and, [Depression among Urban Fathers with Young Children: A Research Report with Tips for Responsible Fatherhood Programs and Stakeholders](#), US Department of Health & Human Services, Administration for Children & Families, Office of Family Assistance; and, [The Father Absence Crisis in America](#)

²⁶ Until October 1, 2016, Maryland law required all records of CPS "screened out" reports, as well as all records of investigations in which abuse and neglect was ruled out, to be expunged within 120 days.

²⁷ EPIC (Executives Partnering to Invest in Kids) Family-Friendly Workplace Assessment & Toolkit

J. Policies to Provide Quality Care & Education in Early Life

- Adequate child care subsidies with no waiting list for access are known to decrease rates of child abuse and neglect²⁸
 - SB 379/HB 430 Education – Child Care Subsidies – Mandatory Funding Levels was signed into law in 2018. The Maryland Family Network, a Maryland Essentials for Childhood partner, led the efforts on SB 379 which increases Maryland's child care subsidy rates to give parents access to quality care and establishes a new “floor” so that rates never again fall so low.

BRAIN SCIENCE AS A STRONG FOUNDATION FOR GOVERNOR HOGAN'S VISION OF ECONOMIC OPPORTUNITY & STRATEGIC GOALS

From the moment we take our first breath to the moment we take our last, human connections (attachment and bonding) are central to everything in our lives, both individually and collectively. We know this intuitively, but neuroscience now clearly illustrates that our human interactions create the neural connections in our brains that form the very foundation of human development, relationships, learning, health, and economic prosperity. We can see, as in the illustration below, how the brain, especially the all-important frontal lobe, is impacted by adversity in childhood.²⁹

While Governor Hogan's four strategic goals identified in Maryland Children's Cabinet Three-Year Plan (Reduce the Impact of Incarceration on Children, Families, and Communities; Improve Outcomes for Disconnected/Opportunity Youth; Reduce Childhood Hunger; and Reduce Youth Homelessness) are very important to youth well-being, they are not sufficient to realize the Governor's goal of greater economic stability and human capital formation to long-term self-sufficiency for children, youth, and families. Each of Governor Hogan's goals would be strengthened

²⁹ <https://www.lcsun-news.com/story/news/local/new-mexico/2018/01/21/severe-childhood-trauma-alter-developing-brain-create-lifetime-risk/1039104001/>

by purposeful dissemination and an understanding of the implications of the science of the developing brain, ACEs, and resilience. The Action Items laid out in the Three-Year Plan should each be grounded in this science. Policy makers should ensure that state agency policies, strategies, and technical assistance focus on strengthening caregiver, family, and community capacity to create safe, stable and nurturing relationships and environments that most importantly promote healthy child and youth development and, in turn, prevent a multitude of negative outcomes from substance abuse, mental illness, high school dropout, delinquency, youth suicide, bullying, youth homelessness, intimate partner violence, youth unemployment, and child maltreatment. A vision based in the science of the developing brain, ACEs and resilience has helped communities around the country (especially in states where there has been coordinated efforts to disseminate the science) to coordinate their efforts at both the state and local level to move the dial on important measures such as significantly reducing high school suspension rates and increasing graduation rates.³⁰ The following core concepts should be infused into the Children’s Cabinet Action Plan:

- I. **A primary focus on Early Childhood Development is foundational to promotion and prevention efforts, i.e., Brains are built from the bottom up. Skills beget skills. The ability to change brains and behavior decreases over time (brain plasticity).**

The Ability to Change Brains and Behavior Decreases Over Time

³⁰ See, [Paper Tigers](#) documentary

The Council believes that knowledge and understanding of core concepts of neuroscience, ACEs, and resilience should serve as a foundation for public policies that affect the lives of children, their families, and their communities. Building strong healthy families and communities requires that we make investing in early childhood a high priority to ensure social, emotional, behavioral, cognitive, and physical health throughout the lifespan. It is much easier and less expensive to support caregivers, families and communities to build a strong foundation in early childhood than to wait and address weaknesses in the foundation later. See Economic Costs of Child Maltreatment in Diagram below:

ANNUAL ECONOMIC COSTS OF CHILD MALTREATMENT IN MARYLAND

SOURCE: "An Environmental Scan of Maryland's Efforts to Prevent Child Maltreatment"

DIRECT COSTS	
Child Welfare	438,887,488
Law Enforcement	79,638
Mental Health	10,440,979
Hospitalizations	85,879,430
INDIRECT COSTS	
Special Education	22,325,386
Juvenile Justice	52,214,201
Mental Health & Health Care	811,135
Adult Criminal Justice	323,568,000
Lost Productivity	610,457,162
TOTAL COSTS:	1,544,663,419

Our failure to prevent children's maltreatment (CM) *before it occurs* is conservatively estimated to cost Maryland's economy, businesses and taxpayers over \$1.5 billion each year. Investing in child well-being and preventing CM is not only *humane and just*, but *makes good economic sense*.³¹

- II. **Prevention of Childhood Adversity and Early Intervention to Mitigate Trauma is a necessary precursor to effectively preventing many youth problems, including youth homelessness and disconnection.**

A recent study looked at the link between ACEs and adult education, employment, and income. Data was analyzed from ten states and the District of Columbia that used the adverse childhood

³¹ [Why Early Investment Matters?](#), The Heckman Equation, James J. Heckman, PhD

experiences (ACE) module in their 2010 Behavioral Risk Factor Surveillance System. Participants with higher ACE scores were more likely to report high school non-completion, unemployment, and living in a household below the federal poverty level compared to those with no ACEs. This evidence suggests that preventing early adversity may impact health and life opportunities that reverberate across generations.³² Another Minnesota study in 2016, found that of all students surveyed, 4 percent had experienced four or more adverse childhood experiences. In comparison, 16 percent of homeless children surveyed had experienced four or more adverse childhood experiences.³³ Waiting to address symptomatic behaviors (such as: youth disconnection, homelessness, school failure, substance abuse, etc.) and illness (depression, anxiety, suicide, etc.) until children enter school, their teen years, or adulthood requires expending more resources and producing less satisfactory results for both the individuals and the communities in which they live.³⁴

³² Adverse Childhood Experiences and Life Opportunities: Shifting the Narrative, *Children & Youth Services Journal*, Marilyn Metzler, RN, MPH; Melissa T. Merrick, PhD; Joanne Klevens, MD, PhD, MPH; Katie A. Ports, PhD; Derek C. Ford, PhD.

³³ [2016 Minnesota Survey of 8th, 9th, and 11th graders regarding ACEs.](#)

³⁴ Research has shown adverse childhood experiences to have multiple negative impacts throughout an individual's life. More ACEs reduce the likelihood of high school graduation and holding a skilled job (Giovannelli et al, 2016). More ACEs also increase the likelihood of teen pregnancy and fetal death in pregnancy (Hillis et al, 2004); behavioral problems (Greeson et al, 2014); juvenile arrest, and felony charges (Giovannelli et al, 2016). Moreover, ACEs can negatively impact a wide range of health and social factors including an increased risk of homelessness (Herman et al, 1997), illicit drug use (Dube et al, 2003) and depression (Giovannelli et al, 2016; Anda et al, 2005).

Anda, R. F., V. J. Felitti, J. D. Bremner, J. D. Walker, Ch Whitfield, B. D. Perry, Sh R. Dube, and W. H. Giles. 2005. "The Enduring Effects of Abuse and Related Adverse Experiences in Childhood." *European Archives of Psychiatry and Clinical Neuroscience* 256 (3): 174–86.

Dube SR, Felitti VJ, Dong M, Chapman DP, Giles WH, and Anda RF. 2003. "Childhood Abuse, Neglect, and Household Dysfunction and the Risk of Illicit Drug Use: The Adverse Childhood Experiences Study." *Pediatrics* 111 (3): 564–572 9p.

Giovannelli, Alison, Arthur J. Reynolds, Christina F. Mondt, and Suh-Ruu Ou. 2016. "Adverse Childhood Experiences and Adult Well-Being in a Low-Income, Urban Cohort." *Pediatrics*, April, peds.2015-4016.

Greeson, Johanna K. P., Ernestine C. Briggs, Christopher M. Layne, Harolyn M. E. Belcher, Sarah A. Ostrowski, Soeun Kim, Robert C. Lee, Rebecca L. Vivrette, Robert S. Pynoos, and John A. Fairbank. 2014. "Traumatic Childhood Experiences in the 21st Century Broadening and Building on the ACE Studies With Data From the National Child Traumatic Stress Network." *Journal of Interpersonal Violence* 29 (3): 536–56.

Herman, D B, E S Susser, E L Struening, and B L Link. 1997. "Adverse Childhood Experiences: Are They Risk Factors for Adult Homelessness?" *American Journal of Public Health* 87 (2): 249–55.

Hillis, Susan D., Robert F. Anda, Shanta R. Dube, Vincent J. Felitti, Polly A. Marchbanks, and James S. Marks. 2004. "The Association Between Adverse Childhood Experiences and Adolescent Pregnancy, Long-Term Psychosocial Consequences, and Fetal Death." *Pediatrics* 113 (2): 320–27.

The brain has the greatest capacity for change in the earliest years. Unfortunately, we as a society tend to wait until teens begin to show symptoms of earlier childhood adversity before we allocate resources to addressing the impact of this adversity on the brain when our efforts are less likely to help and are significantly more expensive.

III. **Data systems should track the trajectory of children from one state system and/or service to the next.**

Current systems have a plethora of duplicative data. However, little sharing takes place between systems and multiple systems working with the same families do so with little knowledge and coordination of services provided in other systems. The Maryland Child Abuse & Neglect Fatality (MCANF) Review Committee was struck by the number of systems in which caregivers had been involved, both in their childhood and early adulthood (e.g. child welfare, Medicaid, SNAP, TANF, juvenile justice, mental health, and substance abuse services) with resulting poor outcomes for themselves and tragically, fatal outcomes for their young children. Tracking of long-term outcomes for children and families requires tracking the life course across systems. If a child who receives services from child welfare and later ends up failing or dropping out of school, without a career, in juvenile services, homeless, pregnant as a teen, sexually trafficked, depressed, suicidal, abusing substances or experiencing a child fatality, the system cannot be said to have succeeded. Unfortunately, our current systems track only short-term system-specific outcomes.

The Council and MD EFC are encouraged by the Governor's investment in MD THINK and are cautiously optimistic that it will integrate access to programs across agencies, give front-line workers information to provide services in the field, link to important data from other professionals in real time, decrease duplicative data entry saving time to spend with clients, share data across agencies, and provide the ability to enter and track outcomes across agencies and the lifespan to inform decision-making regarding the programs, systems, and services improvement on behalf of children and families.

IV. Using Brain Science to Design Multi-Generation Paths Out of Violence, Poverty, Addiction and Mental Illness

35

Adverse childhood experiences, including persistent poverty, can directly derail brain development and the executive function skills (impulse control, working memory, and mental flexibility) most needed for become economically self-sufficient. Science is increasing our understanding of the challenges caused by ACEs, and with that understanding comes the ability to improve policy and program design. The sections of the brain impacted by ACEs remain plastic well into adulthood. “To attain economic independence, low-income families today must navigate a complex environment requiring strong strategic thinking skills to set a career destination and optimize their lives in the five key areas Crittenton Women’s Union has identified as pillars of its Bridge to Self-Sufficiency® (Bridge) theory of change: family stability (principally housing and child stability); management; and career management.”³⁶ Through effective coaching, executive function skills may be strengthened and improved leading to improved outcomes in relationships (people skills), parenting, money management, educational attainment and career success.³⁷ Coaching parents who have been impacted by ACEs, in turn helps ensure the development of those skills in their children and subsequent generations.

V. Understanding brain science, ACEs and how trauma impacts executive function skills is critical to providing the best possible Customer Service in child and family service systems.

As one of Governor Hogan’s top priorities is excellent customer service to Maryland residents, it should be noted that “simply educating staff about the special executive function challenges low-income families face and the causative factors for these challenges can significantly improve staff interactions with clients and the quality of program delivery. Staff who formerly might have attributed willful intent to participants’ seemingly counterintuitive decision making or behaviors, instead will realize that such thinking or behaviors is quite logical given the participants’ history and experience. This realization alters staff behavior, increases tolerance, and generates more useful ideas and interventions that improve outcomes.”³⁸ As level II of the Governor’s G.O.L.D. Standard Customer Service Training initiative, all state agency staff working with the public, beginning with executive staff and supervisors, should be trained by ACEs Interface Master Trainers.

³⁷ Ibid. p.13.

³⁸ Ibid. p. 14.

VI. Understanding ACEs Changes Practice: A Note on the Opioid Epidemic

Dr. Daniel Sumrok, director of the Center for Addiction Sciences at the University of Tennessee Health Science Center's College of Medicine (and one of the first 106 physicians in the U.S. to become board-certified in addiction medicine by the [American Board of Medical Specialties](#)) learned about ACEs about two years ago. It was a big turning point for his understanding of addictions. "I was working in an eating disorders clinic and someone told me '90 percent of these folks have sexual trauma'. I remember thinking: That can't be right. But that was exactly right. Since I've learned about ACEs, I talk about it every day."

According to Dr. Sumrok, addiction shouldn't be called "addiction". It should be called "ritualized compulsive comfort seeking":

"Ritualized compulsive comfort-seeking (what traditionalists call addiction) is a *normal* response to the adversity experienced in childhood, just like bleeding is a normal response to being stabbed. The solution to changing the illegal or unhealthy ritualized compulsive comfort-seeking behavior of opioid addiction is to address a person's adverse childhood experiences (ACEs) individually and in group therapy; treat people with respect; provide medication assistance in the form of buprenorphine, an opioid used to treat opioid addiction; and help them find a ritualized compulsive comfort-seeking behavior that won't kill them or put them in jail."³⁹

Since learning of ACEs, Dr. Sumrock screens all his patients for ACEs, goes over each question with them, and they get ACEs education and group therapy to help them understand their lives and addictions better.

A recently released "study has shown the significance of ACEs and ACEs-science-informed treatment: Each additional type of adverse childhood experience increases a person's risk of relapse during medication-assisted opioid treatment by a whopping 17 percent. And each visit to a clinic that integrates trauma-informed practices based on ACEs science reduced the relapse rate by two percent, which can carry a person perhaps not to zero, but to a minimal risk of relapse... The study, "[Adverse childhood experiences predict opioid relapse during treatment among rural adults](#)", appears in the September 2019 issue of the journal, *Addictive Behaviors*, and was published online last week."⁴⁰

³⁹ "[Substance-abuse doc says: Stop chasing the drug! Focus on ACEs](#)", Jane Stevens, ACEs Connection 2017.

⁴⁰ "Bad news-good news: Each additional ACE increases opioid relapse rate by 17%; each ACE-informed treatment visit reduces it by 2%" <https://www.acesconnection.com/blog/bad-news-good-news-each-additional-ace-increases-opioid-relapse-rate-by-17-each-ace-informed-treatment-visit-reduces-it-by-2>

SCCAN RECOMMENDATIONS BY AGENT/AGENCY:

“If somebody would have listened, how many lives could have been saved?”

Gemma Hoskins, “The Keepers”

Break down and rebuild systems that do not work to protect children and prevent child maltreatment and other childhood adversity from happening in the first place. To our policy makers—we say, the science is clear; our children’s pain, both current and generational unfolds daily before our eyes if we are willing to look; innovation is possible; and it requires courage to create a seismic shift in how our child and family serving agencies care for those they are meant to serve.

GOVERNOR

Strong leadership is essential to raising awareness of Adverse Childhood Experiences (ACEs) and encouraging communities to invent wise responses in support of our children and Maryland’s future prosperity. The science of brain development, ACEs, and resilience must be front and center in our conversations on health, education, the economy, and community well-being and safety. To ensure public policy and practice align with the science of the developing brain, we recommend that the Governor:

1. Take meaningful action, including convening a statewide ACEs & Resilience Summit, to raise awareness of brain science, adverse childhood experiences (ACEs) and resilience and build community commitment to prevent, reduce, and respond to ACEs by launching an ACEs Initiative similar to Governor Bill Haslam and First Lady Chrissy Haslam’s Launch [Building Strong Brains Tennessee’s ACEs Initiative](#) or First Lady Tonette Walker’s [Fostering Futures](#), including [Trauma-Informed State Agencies](#).⁴¹
2. Issue an executive order similar to Governor Carey’s in Delaware ⁴² mandating child and family serving agencies participate in collective impact efforts to promote safe, stable, and nurturing relationships and environments for children, build strong brains, prevent ACEs, and promote resilience. Building upon efforts of Maryland’s Essentials for Childhood Initiative and local ACE community initiatives in Frederick, Washington, Harford Counties, and Baltimore City, designate a state lead agency for the Maryland Essentials for Childhood Initiative⁴³
3. Require each member of the Children’s Cabinet to designate authority to two members of their staff to lead their agency’s full participation in the initiative.
4. Call upon key leaders in Maryland’s business and faith-based communities to join in the Initiative.⁴⁴

⁴¹ Examples of other states with Brain/ACEs Initiatives: Wisconsin, South Carolina, North Carolina, Iowa, Colorado, Washington, California, Alaska, and Minnesota.

⁴² Delaware Governor John Carney’s [Executive Order on Making Delaware a Trauma Informed State](#).

⁴³ Include language that the policy decisions, statements, and funding announcements of Maryland Children’s Cabinet agencies will acknowledge and embed the principles of early childhood brain development and will, whenever possible, consider the concepts of toxic stress, adverse childhood experiences, and buffering relationships, and note the role of prevention, early intervention and investment in early childhood years as important strategies to achieve a lasting foundation for a more prosperous and sustainable state through investing in human capital. Use a multi-generation approach- children come with parents and grandparents; and, will become parents themselves.

⁴⁴ See, EPIC-[Executives Partnering to Invest in Kids](#) , [Ready Nation](#), [Washington County, OR, Faith-Based Organizations](#), and [Faith Leader’s Guide to Paper Tigers: Adverse Childhood Experiences](#)

5. Support legislation and funding of a Children's ACEs Prevention Trust Fund administered by a public-private board of directors to lead innovative interventions and financing across the state.⁴⁵
6. Establish an ongoing Child Welfare Health Coordination Expert Panel led by the Child Welfare Medical Director to ensure communication and coordination between the multiple agencies that provide health services to children with the child welfare system.

CHILDREN'S CABINET AGENCIES

GOC, GOCCP, DHS, MDH, DJS, MSDE, DOD, DPSCS, DBM, DLLR

1. Review the Tennessee and Wisconsin examples of statewide models to create a culture change in child and family serving agencies to focus on a multi-generation approach to responding to childhood adversity based on the science of the developing brain, ACEs (trauma/toxic stress), and Resilience.
2. Review Maryland's 2015 baseline ACE Module Behavioral Risk Factor Surveillance System (BRFSS) data, and the 2018 data when it becomes available in July 2019.
3. Embed brain science, ACEs (trauma/toxic stress), and resilience into the Children's Cabinet Three-Year Plan. Start by providing ACE training to all Children's Cabinet members. When creating future plans, consider how each recommendation might reduce ACEs or the effects of ACEs and how it might improve resilience.
4. Offer free screenings and time to view the film [*RESILIENCE: The Biology of Stress & The Science of Hope*](#) to introduce staff to the brain science, ACEs, resilience and trauma-informed systems and provide opportunity for dialogue of how it might be used to provide better customer service.
5. As level II of the Governor's G.O.L.D. Standard Customer Service Training Initiative, have ACE Interface Master Trainers train all staff, beginning with supervisors.
6. Explore ways to increase awareness of the brain science and the impact of ACEs on the people your agencies serve. Integrate the science of the developing brain, ACEs, and resilience across agencies and within individual agencies by:
 - Partnering in Maryland Essentials for Childhood Initiative to ensure cross-agency coordination.
 - Considering the appropriateness of screening clients for ACEs and resilience factors.
 - Providing pre-service and in-service training to all staff on brain science, ACEs and resilience.
 - Identifying a standard of care that includes assessing for and responding to ACEs, to be integrated into contracts as performance measures.
 - Embedding the science into strategic planning with local agencies and connect to funding.
 - Ensuring organizational policies and regulations reflect the science of the developing brain, ACEs, and resilience.
 - Ensuring practice models reflect the science of the developing brain, ACEs, and resilience.
 - Investing resources in evidence-based trauma interventions and creating a trauma-informed agencies.
 - Using communication efforts to connect the dots between state child and family serving programs

⁴⁵ <https://ctfalliance.org/>

as a response to the science. Developing an umbrella message and integrating it into messaging across agencies and programs, including websites and press releases regarding child and family serving policies, and programs.

7. In support of effective implementation of HB 1582, Human Services-Children Receiving Child Welfare Services-Centralized Comprehensive Health Care Monitoring Program, 2018:

Establish an ongoing Child Welfare Health Coordination Expert Panel led by the Child Welfare Medical Director to ensure communication and coordination between the multiple agencies that provide health services to children with the child welfare system. Suggested members of this panel are included in the footnote⁴⁶. The Panel's responsibilities should include:

- Develop regulations and guidelines to ensure that children with suspected maltreatment receive timely, high quality, evidence-based medical assessments.
- Develop regulations and guidelines for effective management and oversight of health care services for children in foster care.
- Program evaluation and oversight to monitor the percentage of children who receive timely, appropriate, and accurate medical evaluations.
- Create a mechanism for adequate reimbursement of providers that is tied to provider performance
- Report annually to the Governor and legislature regarding the progress of implementation.

Require that child serving agencies and youth serving organizations receiving state funding institute the Comprehensive Child Sexual Abuse training, policies and guidelines below (under the recommendation to the General Assembly).

⁴⁶ Suggested Members: Interagency Child Welfare Health Coordination Expert Panel

The Panel should include representatives from the following agencies and organizations:

- Maryland Children's Cabinet;
 - Maryland Children's Alliance;
 - Maryland Chapter of the American Academy of Pediatrics;
 - Maryland CHAMP program (CHAMP physician and nurse affiliates);
 - Maryland Forensic Nurses;
 - DHS Out of Home Services;
 - DHS Child Protective Services and Family Preservations Services;
 - DHS Resource Development, Placement, and Support Services;
 - MDH, Maternal and Child Health Bureau;
- MDH, Environmental Health Bureau, Center for Injury & Sexual Assault Prevention
- Medicaid;
 - Behavioral Health;
 - DHS and MDH representatives with expertise in their agency's child fatality review processes;
 - Maryland State's Attorney's Association;
 - County health department representatives;
 - County DSS agency representatives;
 - Maryland Legal Aid Bureau;
 - Maryland CASA;
 - Programs that currently contribute to medical and forensic services funding for children involved in the child welfare system
- o Maryland Medicaid,
 - o MDH Center for Injury and Sexual Assault Prevention,
 - o GOCCP/VOCA).

8. Ensure your agency has a Report Child Abuse hotlink on its homepage and a link to [DHS page for reporting suspected abuse](#).

GENERAL ASSEMBLY

1. Hold an ACEs Roundtable for Legislators to educate Members of the General Assembly on the neuroscience, epigenetics, ACEs, and resilience and its implications for policy to address childhood adversity as a public health epidemic.
2. Pass a joint resolution mandating child and family serving agencies' participation in collective impact efforts to promote safe, stable & nurturing relationships and environments for children (Essentials for Childhood (EFC)) & preventing ACEs.⁴⁷

3. Pass legislation establishing a robust Children's/ACEs Prevention Trust Fund.⁴⁸

Maryland's current Children's Trust Fund was established by Sec. 13-2207 of the Maryland Health General Article. While funds initially supported small prevention grants, an ongoing source of income for the Trust Fund was never established. At the same time, many states across the country have developed robust prevention trust funds with combined annual revenues in excess of \$100 million dedicated to prevention. Children's Trust Fund Boards actively raise funds to support statewide prevention efforts. This is a gap in Maryland's infrastructure to support prevention. The National Alliance for Children's Trust & Prevention Funds is available to consult with state leadership on the most successful models across the country.

4. Pass legislation providing for Paid Family Leave. Paid Family Leave is associated with decreased infant mortality, improved child health, improved parent-child bonding, and reduced child maltreatment.
5. Pass legislation that requires all public and nonpublic schools and their contracting agencies to do CPS background checks on all applicants for positions involving direct contact with minors.
6. Build upon legislation passed unanimously by both Chambers (HB 1072, Education Law Article, Sec. 6-113.1) by passing similar legislation to include the following:
 - Expand child sexual abuse prevention in public and non-public schools, by requiring child sexual abuse training, policies, and codes of conduct for volunteers.

⁴⁷ Examples of State Legislation:

- 2013 Wisconsin passed Senate Joint Resolution 59. <https://docs.legis.wisconsin.gov/2013/related/proposals/sjr59>
- 2014 California Legislature, Assembly [Concurrent Resolution No. 155](#), relative to childhood brain development passed.
- 2011 [Washington House Bill 1965](#), passed creating the Washington State ACEs Public Private Initiative.
- 2014 Massachusetts passed a [Safe and Supportive Schools Act](#) within their gun violence reduction law:
- 2017 Vermont passed legislation to establish an [Adverse Childhood Experiences Working Group](#) of key legislators to consider future legislation. Four bills were introduced as a result of the report and [Act 204](#) passed in 2018 based on the report.
- 2015 Minnesota [HF 892/ SF 1204 Resolution](#) on childhood brain development and ACEs.
- 2016 Alaska [House Resolution 21](#)
- 2017 Utah House [Concurrent Resolution 10](#)

⁴⁸ [The National Alliance for Children's Trust & Prevention Funds](#).

- Mandating all state agencies serving children and youth and youth-serving organizations to provide child sexual abuse prevention training, policies, and codes of conduct for adults in direct contact with children and youth.

Child sexual abuse is a complex problem requiring a comprehensive approach. All adults in child and youth serving organizations play a role in preventing child sexual abuse *before it occurs*. Failing to provide adult-focused training to volunteers, as well as employees, of all child and youth-serving organizations leaves kids vulnerable both before and after abuse occurs. Comprehensive Child Sexual Abuse Prevention in youth serving agencies should include the components enumerated in HB 1072 as passed in 2018.

7. Pass legislation eliminating the civil statute of limitations for child sexual abuse, including a two year look-back window or “window of justice”. Nine states have no civil statute of limitations for child sexual abuse.⁴⁹ Eleven states and the District of Columbia have created look back windows.⁵⁰ The average age of disclosure for child sexual abuse is 52. Maryland’s current statute allows certain cases up to age 38. Goals of look back windows, opening prior barred claims for a short period of time include:
 - Identifying hidden child predators (during California’s look back window, more than 300 hidden predators were identified). Civil litigation and discovery provide a critical tool to states to expose predators who remain a risk to children.
 - Disclosing the facts of the epidemic of child sexual abuse to public
 - Arming parents with facts to protect children
 - Shifting cost of sexual abuse from the victim to those who caused it
 - Providing justice for victims ready to come forward
8. Pass legislation to change the Medicaid eligibility categories to make identification of children in foster care more transparent.
 - Currently, the state uses eligibility categories that include subsidized adoption and subsidized guardianship cases to identify the foster care population. In addition, kinship care cases that are receiving TCA are excluded. Medicaid data that the state uses in reports and that could potentially be used to monitor the health of the foster care population is not an accurate reflection of the youth in foster care. Improving or redefining eligibility codes would allow the state to more accurately monitor health care utilization (including psychotropic medication) use for children in foster care. In addition, more transparent eligibility codes will allow programs that use these codes the ability to easily identify youth in foster care. Identification will result in improving coordination with the child welfare agency and will assist the state in providing Medical Assistance to former foster care youth until age 26.

⁴⁹ [Child USA, 2019](#) Alaska, Connecticut, Delaware, Florida, Illinois, Maine, Minnesota, Nebraska, and Utah.

⁵⁰ Ibid. California, Connecticut, Delaware, District of Columbia, Georgia, Hawaii, Massachusetts, Michigan, Minnesota, New Jersey, New York, and Utah.

DHS

1. See Children's Cabinet agency recommendations above.
2. As plans for the new hotline for reporting child abuse are implemented:
 - Ensure that de-identified aggregate data is collected and analyzed to inform decision-making to improve the reporting and screening system.
 - Ensure that local DSS have updated phone technology, sufficient staff and standardized training to implement the statewide hotline.
3. Embed the brain, ACEs, and resilience science and a multi-generational approach into policies across administrations at DHS. Implement strategies to prevent and mitigate ACEs (trauma-informed) and build resilience to create safe, stable, and nurturing environments for the children of parents receiving DHS services (CSE, FIA and SSA)⁵¹
4. As level II of the G.O.L.D. Standard Customer Service Training, use ACE Interface Master Trainers to train all staff who work with the public in brain science, ACEs, and resilience.
5. Increase efforts that promote fathers' and mothers' male partners' emotional support, rather than solely financial support, of their children and families.
 - Collaborate with partners to further infuse fatherhood and male responsibility initiatives into settings with boys and men.
 - Make deliberate and special efforts to include male caregivers in attachment and parenting skills programs (e.g., Circle of Security Parenting, home visiting sessions)
6. Ensure that leaders and participants in the development of MD THINK and CJAMS include experts in child welfare policy, database design and data management, and child health and health policy (the State Medical Director for Children Receiving Child Welfare Services) so that the system can effectively:
 - Integrate child-welfare, birth, and death data in order to analyze fatal maltreatment risks.
 - Collect longitudinal data on foster youth and their families so that well-being and long term outcomes can be tracked. These outcomes should include frequency of placement changes, frequency of school changes, and medical and mental health services needed and received. This was a repeated recommendation included in DHR's Quality Assurance Processes in Maryland Child Welfare.⁵²
 - Determine how often children involved with child welfare end up involved with the Department of

⁵¹ "Applying the science of Child Development in Child Welfare Systems", Center on the Developing Child, Harvard University.

⁵² In the 5th Annual Child Welfare Accountability Report dated December 2011, DHR makes this recommendation repeatedly and the draft of the 6th Annual Child Welfare Accountability Report, includes this robust explanation:

Recommendation: Track entry cohorts over time. Prospective measures are preferable to measure child welfare outcomes. Following one population of children and youth through their child welfare experiences is the single best, least biased, method of measuring service receipt and outcomes (Wulczyn, 2007; Zeller & Gamble, 2007). Examining children's trajectory through the various levels of child welfare services is the best way to understand the effects of services on children and families. Entry cohort analyses are being successfully utilized in Maryland to examine welfare service utilization through a partnership between DHR/SSA and UM/SSW and should be expanded in the future. It is in Maryland's best interest to utilize the power available through the MD CHESSE system to examine the trajectory of children through the child welfare system in a prospective manner. A prospective analysis will allow Maryland to follow children from report through investigation, to in-home or out-of-home child and family services, to the outcomes of safety, permanency, and well-being. (Maryland Child Welfare Performance Indicators (Draft), December 2012 p. 38)

Juvenile Services, how their educational achievement and health compares to their non-system involved peers, and for older foster youth who transition out of care, whether they have stable housing as adults.

- Comply with the MOU in place between DHS and MSDE to allow for the sharing of data regarding foster youth since September 27, 2013 and the federal requirement pursuant to the Every Student Succeeds Act for states to track educational outcomes for foster youth.
- Track the quality of the experience for foster youth while they are in care. Currently, we don't know basic information, such as: how often they have to change placements, how often they change schools, whether they are hospitalized, and whether they need in-patient psychiatric treatment.
- Track when families are determined to need services, determine whether those services were received, and if not received, identify the reasons why not.⁵³

Social Services Administration

1. See Children's Cabinet recommendations above.
2. See Joint MDH-DHS recommendations above.
3. Implement Comprehensive Child Sexual Abuse Prevention Policy (see recommendations under General Assembly) to protect children in foster care. Ensure that all adults involved in the child welfare system are trained in the primary prevention of child sexual abuse, including: child welfare workers and supervisors, foster parents, people who work or volunteer in group homes and residential treatment centers, and licensed contractors involved with foster youth. Institute policies and codes of conduct for the prevention of child sexual abuse within state and local child welfare agencies.
4. Ensure that all children who are referred to the local DSS are screened for child sexual abuse and are referred and linked to service for treatment. Cases should remain open until linked to treatment services. Case records should indicate 1) child sexual abuse and 2) documentation that the child is receiving treatment.
5. Screen in all children under 3 as Risk of Harm cases and do an in-home assessment of risk. Provide services for families at risk for child fatality or near fatality.
6. Involve fathers in child welfare cases as a matter of course.

⁵³ During the 2013 Legislative Session when the statute regarding substance exposed newborns (Md. Code Ann. Family Law § 5-704.2) was amended the General Assembly required the Department of Human Resources (DHR) to file an interim and final report analyzing implementation of the changes. DHR's data in those reports is telling for our purposes and underscores the importance of tracking when families receive services. The Preliminary Report from October 2014 documents 1,734 assessments of families with substance exposed newborns. According to the report, there were 400 and 89 instances of "conditionally safe" (safe if the family accepts services) and "unsafe" respectively. (Maryland Department of Human Resources, "Substance-Exposed Newborn Reporting in Maryland— Preliminary Report," p. 3 (October 1, 2014)) Yet, only **34% of these** individuals (168) are documented as receiving services. (Id. at p. 4. DHR's report states that MD CHESSIE might be undercounting who actually receives services.) Unfortunately, the October 2015 report documents an even smaller percentage of families receiving services. Only **26%** of families (347) identified as "conditionally safe" and "unsafe" received services. (Maryland Department of Human Resources, "Substance-Exposed Newborn Reporting in Maryland—Final Report," p. 4 (October 1, 2015)) **Given that DHR's 2015 report indicates that almost 75% of families assessed as needing services did NOT receive any, it is essential that we see why these families aren't getting the help LDSS determines that they need.**

MDH

1. Implement Comprehensive Child Sexual Abuse Prevention Policy (see recommendations under General Assembly) to protect children in the custody of the state. Ensure that all youth serving facilities licensed or funded with state funds are trained and institute child sexual abuse prevention policies.
2. Continue to collect BRFSS and YRBS ACE module data in Maryland every three years and collect resilience data in the BRFSS, as is being done in Wisconsin⁵⁴.
3. Fund the baseline collection of child maltreatment Awareness, Commitment, and Norms Survey initiated by the CDC's Essentials for Childhood and implemented by the five EFC funded states, as well as, several unfunded states. Collection of this data in other states cost approximately \$10,000.
4. Partner with the health care community to improve integration of behavioral and primary health care and identify and promote strategies to assess for and respond to ACEs.
5. Ensure that all home visiting programs (MIECHV, MOTA grants, Community Health Specialists, etc.) engage fathers, as well as, mothers. Purposefully recruit fathers as home visitors.⁵⁵
6. Maryland's Medicaid program should develop a system to generate a regularly updated list of all prenatal care providers serving Medicaid recipients and their MPRA (Maryland Prenatal Risk Assessment) completion rates for purposes of conducting ongoing provider education on MPRA procedures.⁵⁶
7. Streamline the Postpartum Infant and Maternal Referral (PIMR) form and completion process in partnership with local health departments and birthing hospitals.⁵⁷
8. Link completion of MPRA and PIMR and linkage to services to service provider fee payment.⁵⁸
9. Medicaid should reimburse for psychosexual evaluation of youth. These should be considered medically necessary and key in the prevention of youth on younger child sexual abuse which is approximately 1/3 of all child sexual abuse perpetration.
10. Increase Infant and Early Child Mental Health workforce training in the core competencies. Integrate core competencies into evidence-based programs serving young children.
11. Amend Maryland's 1915i Waiver to eliminate the Medicaid barriers young children and their families face

⁵⁴ Maryland is collecting its second cohort of ACE module data in 2018, but has not yet collected data on resilience. Sege, R., Bethell, C., Linkenbach, J., Jones, J., Klika, B. & Pecora, P.J. (2017). *Balancing adverse childhood experiences with HOPE: New insights into the role of positive experience on child and family development*. Boston: The Medical Foundation. Accessed at www.cssp.org

⁵⁵ See MCANF preliminary observations under "Magnitude of the Problem in Maryland" section.

⁵⁶ Ibid.

⁵⁷ Ibid. Prenatal care providers are required by Maryland Medicaid regulations to submit an MPRA for each pregnant woman at her first prenatal care visit. Women are then outreached by nurses and home visitors, to further assess needs for care and eligibility for community services, and link her to these services. Mothers and infants may also be outreached and referred following delivery; birthing hospitals are required by state regulations to submit a PIMR at postpartum discharge when Medicaid recipients have psychosocial risk factors (e.g., limited or and/or deliver infants who are born at low birth weight or have had a stay in the NICU).

⁵⁸ Ibid.

when trying to access behavioral health services for young children and their parents.

12. Medicaid should eliminate some of the billing barriers that behavioral health providers serving young children face including:

- allowing behavioral health providers working with young children up to five appointments before they need to have a diagnosis since it takes longer than one visit to diagnose young children.
- allowing behavioral health providers to use the DC:0-5 for diagnosing young children as it is better tailored for their developmental milestones.

MSDE

1. See Children's Cabinet recommendations above.
2. Implement Comprehensive Child Sexual Abuse Prevention Policy within all public schools as mandated by HB 1072 using evidence-based and promising programs, such as the Enough Abuse Campaign's ELearning for Educators.
3. Ensure that all home visiting programs (Office of Special Education-Healthy Families, etc.) engage fathers, as well as, mothers. Purposefully recruit fathers as home visitors.

DJS

1. See Children's Cabinet recommendations above.
2. Implement Comprehensive Child Sexual Abuse Prevention Policy within all facilities that serve children and youth. See recommendations under General Assembly.
3. Ensure that all adults employed by or volunteering at youth serving facilities licensed and/or funded with state funds are trained and institute comprehensive child sexual abuse prevention policy.
4. Ensure that all children are evaluated for child sexual abuse and those who may have been victimized by child sexual abuse are referred and linked to services for treatment. Cases should remain open until linked to treatment services. Case records should indicate 1) child sexual abuse and 2) documentation that the child is receiving treatment.

APPENDIX A

DHS RESPONSE TO SCCAN'S 2017 ANNUAL REPORT

The 2003 amendments to CAPTA require a written response from the state to the SCCAN Annual Report indicating *whether and how* the state will *incorporate each recommendation*: “[n]ot later than 6 months after the date on which a report is submitted by the panel to the State, the appropriate State agency shall submit a written response to State and local child protection systems and the citizen review panel that describes whether or how the State will incorporate the recommendations of such panel (where appropriate) to make measurable progress in improving the State and local child protection system.”

In January 2017, SCCAN's Chair and Executive Director met with representatives from DHS to thank the Department for its response to the 2015 SCCAN Annual Report, follow up on recommendations that were not addressed, and develop a more consistent dialogue between DHS and SCCAN. It was noted that the recommendations to the Governor and General Assembly were not under the direction of DHS and needed to be acted on by other state agencies or a combination of state agencies. In order to eliminate confusion, SCCAN agreed to categorize future recommendations by specific agent/agency and did so beginning with the 2016 report. Despite agency-specific recommendations, most recommendations have remained unaddressed and unanswered.

The Council received a response to its 2017 report from the Executive Director of the Social Services Agency at DHS in September 2018. The Agency responded by enumerating current agency efforts that may address to the following recommendations of the 2017 report:

- Implement strategies to prevent and mitigate ACEs (trauma-informed):
 - *Resilience: The Biology of Stress & the Science of Hope* was screened and discussed at 7 Regional Supervisors meetings and encouraged to be shown to staff in local DSSs.
 - SSA uses Transformational Collaborative Outcomes Management Tools comprised of the CANS and the CANS-F which capture ACEs and additional trauma experiences (Family, School, and Community Violence, Medical Trauma, War and Terrorism Affected, and Witness/Victim to Criminal Activity). CANS is used in Out-of-Home Placement cases now for children over 5; and, will grow to include children under 5, transition age youth once SSA's new data system rolls out. CANS-F is used for Family Preservation cases and once the new data system is in place, CPS staff will use the CANS-F, as well. The University of Maryland Child Welfare Academy (CWA) trains all new staff in CANS and CANS-F.
- Include experts in the development of MD THINK and CJAMS:
 - Professionals from DHS, local DSS, DJS, MSDE, MDH, Attorney General, Chapin Hall, and Institute for Innovation and Implementation are working on the development of MD THINK and CJAMS.
- Institute policies and practices focused on prevention:
 - November 2017, SSA published a new child welfare screening policy
 - Prior to 2017, non-CPS, Risk of Harm cases included: Substance Exposed Newborns, Domestic Violence, or Previous Death or Serious Injury to a Child due to Child Abuse or Neglect, to name a few. DSS can provide assessment and services in these cases.
 - After 2017, non-CPS, Risk of Harm cases, expanded to include: Risk of Sex Trafficking, Prior Indicated or Unsubstantiated CPS Report where Child in Home Under Age 5.

Significantly DHS SSA did not respond as to whether or how the following DHS and SSA-specific recommendations would be addressed:

- Embed the brain, ACEs and resilience science and a mult-generational approach into policies across administrations at DHS. Implement strategies to prevent and mitigate ACEs (trauma-informed) and build resilience to create safe, stable, and nurturing environments for the children and parents receiving DHS services (Child Support Administration and Family Investment Agency, as well as SSA.)
- Implement Comprehensive Child Sexual Abuse Prevention Policy (see recommendations under General Assembly) to protect children in foster care. Ensure that all adults, including foster parents, group homes, residential treatment centers, and licensed contractors involved with foster youth are trained and institute policies in child sexual abuse prevention.
- Ensure that all children who are referred to the local DSS are screened for child sexual abuse and are referred and linked to service for treatment. Cases should remain open until linked to treatment services. Case records should indicate 1) child sexual abuse and 2) documentation that the child is receiving treatment.
- In support of effective implementation of HB 1582, Human Services-Children Receiving Child Welfare Services-Centralized Comprehensive Health Care Monitoring Program, 2018:
 - Establish an ongoing Child Welfare Health Coordination Expert Panel led by the Child Welfare Medical Director to ensure communication and coordination between the multiple agencies that provide health services to children with the child welfare system.
- Increase efforts that promote fathers' and mothers' male partners' emotional support, rather than solely financial support, of their children and families.
- Involve fathers in child welfare cases as a matter of course
 - Collaborate with partners to further infuse fatherhood and male responsibility initiatives into settings with boys and men.
 - Make deliberate and special efforts to include male caregivers in attachment and parenting skills programs (e.g., Circle of Security Parenting, home visiting sessions).
- Ensure that MD THINK:
 - Integrates child-welfare, birth, and death data in order to analyze fatal maltreatment.
 - Collects longitudinal data on foster youth and their families so we can track both their long term outcomes and the quality of their well-being while they are in care. This was a repeated recommendation included in DHS's Quality Assurance Processes in Maryland Child Welfare.
 - MD CHESSEIE's focus on point-in-time data has been a significant barrier in having a true picture of how children and their families who touch our child welfare system do. We need to know how often foster youth end up involved with the Department of Juvenile Services, how their educational achievement and health compares to their non-system involved peers, and for older foster youth who transition out of care, whether, as adults, they have stable financial, employment, housing, and parenting (i.e., their children do not end up in child welfare) outcomes.
 - Complies with the MOU in place between DHS and MSDE to allow for the sharing of data regarding foster youth since September 27, 2013 and the federal requirement pursuant to the Every Student Succeeds Act for states to track educational outcomes for foster youth.
 - Tracks the quality of the experience for foster youth while they are in care. Currently, we don't know basic information, such as: how often they have to change placements, how often they change schools, whether they are hospitalized, and whether they need in-patient psychiatric treatment.
 - Tracks when families are determined to need services, whether they receive those services, and if not, why not, and what follow up occurs.
- Screen in all children under 5 as Risk of Harm cases and do an in-home assessment of risk. Provide services for families at risk for child fatality or near fatality.

- As plans for the new hotline for reporting child abuse are implemented:
 - Ensure that de-identified aggregate data is collected and analyzed to inform decision-making to improve the reporting and screening system.
 - Ensure that local DSS have updated phone technology, sufficient staff, and standardized training to implement the statewide hotline.

As requested in prior years, we respectfully request a response to each recommendation in future reports in order to address any identified barriers to implementation.

APPENDIX B

Questions in the 12-item Resilience Research Centre Adult Resilience Measure (RRC-ARM)

To what extent do the statements below describe you?

Response options: Not at all, a little, somewhat, quite a bit, a lot

1. I have people I can respect in my life
2. Getting and improving qualifications or skills is important to me
3. My family know a lot about me
4. I try to finish what I start
5. I can solve problems without harming myself or others (e.g. without using drugs or being violent)
6. I know where to get help in my community
7. I feel I belong in my community
8. My family stand by me during difficult times
9. My friends stand by me during difficult times
10. I am treated fairly in my community
11. I have opportunities to apply my abilities in life (like skills, a job, caring for others)
12. I enjoy my community's cultures and traditions

APPENDIX C

Questions included in the 12-item Child and Youth Resilience Measure (CYRM)

When you were growing up, during the first 18 years of life, to what extent would the following sentences have described you?

Response options: Not at all, a little, somewhat, quite a bit, a lot

1. I had people I looked up to
2. Getting an education was important to me
3. My parents/caregivers knew a lot about me
4. I tried to finish activities that I started
5. I was able to solve problems without harming myself or others (e.g. without using drugs or being violent)
6. I knew where to go in my community to get help
7. I felt I belonged in my school
8. My family would stand by me during difficult times
9. My friends would stand by me during difficult times
10. I was treated fairly in my community
11. I had opportunities to develop skills to help me succeed in life (like job skills and skills to care for others)
12. I enjoyed my community's cultures and traditions

APPENDIX D

Essentials for Childhood Survey on Awareness, Commitment, Norms

We would like to include you as a participant in the quarterly YouGov study on health and culture across the nation. If you agree to be in this study, we will ask you about your views and experiences with regard to quality of life issues. Participation is voluntary, and you may decline to answer any questions that you do not want to answer. The survey will take about 15 minutes to finish.

Below are some reasons people give to explain why some children struggle (i.e., disrupt the classroom, do poorly in school, become teen parents, get into drugs or involved in crime). For each one, please indicate how important do you think the reason is for why some children might struggle in the United States.

1. Children growing up living in poverty
2. Parents not working hard enough.
3. Families living in neighborhoods with a lot of other families that can't make ends meet
4. People not willing to support solutions that benefit all children, not just their own
5. Parents not thinking about the future of their children
6. Children born with bad personality traits that are passed from one generation to the next
7. Lack of public investment (e.g., in early care and education, schools, job opportunities) in low income neighborhoods and communities of color
8. Families living in unsafe neighborhoods (i.e., with easy access to drugs, guns, or gangs)
9. Children living in families with challenges like substance abuse, violence, mental health problems
10. Employers not adopting family-friendly practices (e.g., paying family and sick leave, flexible schedules to accommodate children's needs)
11. Parents being stressed about money
12. Children not working hard enough in school
13. Families living in neighborhoods with few resources or public services like community centers, libraries, or transportation
14. Children not having high quality (i.e., nurturing, stimulating, safe, and stable) early child care
15. Parents not knowing how to parent correctly
16. Children with learning challenges not getting the support they need
17. Limited political support for helping poor families get out of poverty
18. Children treated unfairly because of their color (e.g., in schools, by police, or the justice system)
19. Parents not having enough time for their children
20. Employers not paying parents enough to support a family
21. Children not thinking things carefully enough and end up making poor choices
22. Parents using harsh or aggressive discipline
23. Parents not supporting their children's learning through educational activities like reading to them or playing with them
24. Children going to poor quality schools
25. Parents not thinking things carefully enough and end up making poor choices.

RESPONSE OPTIONS:

extremely important
somewhat important
neither important or unimportant
somewhat unimportant
not at all important

Below are some things people have suggested communities could do to increase the opportunity for **all children** to succeed.

Please indicate how strongly you support or oppose the idea that communities should provide that all families....

- 26. Have easy access to affordable parenting classes
- 27. Have paid parental leave to care for a new child
- 28. Be able to buy enough nutritious food
- 29. Be able to live in safe and stable housing
- 30. Be able to leave their children in child care that is good for the child's development
- 31. Be able to send their children to high quality preschool
- 32. Be able to send their children to high quality schools in their neighborhood
- 33. Be able to get support to address their child's special learning challenges
- 34. Be able to send their children to schools that don't punish children by suspending or expelling them
- 35. Have easy access to after-school and summer care that provide meaningful opportunities for children
- 36. Have at least one adult (other than a parent or caregiver) who would provide a safe, stable, nurturing relationship for their children (e.g., a mentor, coach, or teacher)
- 37. Be able to live in a safe neighborhood where children aren't exposed to violence or illegal drugs
- 38. Be able to live in a neighborhood where few or no families have a hard time making ends meet
- 39. Be able to live in a city or county where their children are treated fairly in school, by police, or the justice system regardless of the color of their skin
- 40. Have a full-time job that provides sufficient income to cover basic needs for the employee and his/her child
- 41. Have a job that is "family-friendly" (e.g., provides flexible schedules, has on-site child care or provides subsidies for child care, provides paid days to care for sick family members, paid leave to attend school events)
- 42. Have access to health care
- 43. Have access to mental health care or substance abuse treatment, if needed
- 44. Receive income support (cash, vouchers, or tax refund) to cover basic needs (e.g., housing, food, child care) if a bread winner loses his/her job or household income is below the income needed to cover basic needs

RESPONSE OPTIONS

- Strongly support
- Support
- Neither support or oppose
- Oppose
- Strongly oppose

45. Thinking about the ideas you **strongly** supported to increase the opportunity for **all children** to succeed, what action(s) have you personally taken in the past 12 months. (Check all that apply)

- I shared information about their importance with others
- I signed a petition or e-mailed a prewritten letter to decision-makers
- I asked friends or family to sign a petition or write to decision-makers
- I donated money to an organization supporting these ideas
- I made phone calls or went door to door to gather support for them
- I attended a meeting with business or community groups to urge they support them
- I attended a town hall meeting or public rally to support them

I met with an elected official or his/her staff to talk about them
I did none of the above

46. Sometimes we can feel passionate about issues in our community but not have enough time to take action. Again, thinking about the ideas you **strongly** supported to increase the opportunity for **all children** to succeed, how likely are you in the next 12 months to do the following ? (Check all that apply)

I would share information about their importance with others
I would sign a petition or e-mail a prewritten letter to decision-makers
I would ask friends or family to sign a petition or write to decision-makers
I would donate money to an organization supporting these ideas
I would be willing to pay more taxes or higher prices at the register to support them
I would make phone calls or go door to door to gather support for them
I would attend a meeting with business or community groups to urge they support them
I would attend a town hall meeting or public rally to support them
I would meet with an elected official or his/her staff to talk about them
I would do none of the above

In the next section, we would like to know about behaviors often used in caring for young children.

47. How many children live in your household? ____
48. This past year, was there a child under the age of 5 in your home or do you care for children under age 5 at least once a week?

☐ YES ☐ NO (If NO, skip to Q54).

In the past year, how often have you:

49. Let your child (or the child you cared for) know when you liked what he/she was doing?

☐ every day ☐ almost every day ☐ sometimes ☐ seldom ☐ never

50. Responded to your crying infant (or infant you cared for) by trying to comfort them?

☐ every day ☐ almost every day ☐ sometimes ☐ seldom ☐ never

☐ Not applicable because I did not care for an infant this past year

51. Played with or read a story to your child (or child you cared for) under the age of five?

☐ every day ☐ almost every day ☐ sometimes ☐ seldom ☐ never

52. Spanked your child (or child you cared for) on the bottom?

☐ every day ☐ almost every day ☐ sometimes ☐ seldom ☐ never

53. Yelled at or fought with another adult in front of your child (or child you cared for) or where the child could hear

☐ every day ☐ almost every day ☐ sometimes ☐ seldom ☐ never

54. Asked or searched for help with parenting or caring for children when needed?

☐ every day ☐ almost every day ☐ sometimes ☐ seldom ☐ never

55. Helped your child (or child you cared for) express themselves with words when they were angry or frustrated

☐ every time ☐ almost every time ☐ sometimes ☐ seldom ☐ never

56. Been a mentor (like a Big Brother or Big Sister) to an unrelated child?

☐ every day ☐ almost every day ☐ sometimes ☐ seldom ☐ never

II. In this next section, we are interested in your perceptions of how the majority of parents behave with their children. Even if you are not sure, please give us your best guess.

Thinking about the **majority** of parents in [pipe inputstate]: how often do you think they...

57. Let their children know when they liked what they are doing

☐ every day ☐ almost every day ☐ sometimes ☐ seldom ☐ never

54. Respond to their crying infant by trying to comfort them

☐ every day ☐ almost every day ☐ sometimes ☐ seldom ☐ never

58. Play with or read a story to their child under the age of five

☐ every day ☐ almost every day ☐ sometimes ☐ seldom ☐ never

59. Yell at or fight with another adult in front of their child or where their child could hear

☐ every day ☐ almost every day ☐ sometimes ☐ seldom ☐ never

60. Spank their child on the bottom with their hand

☐ every day ☐ almost every day ☐ sometimes ☐ seldom ☐ never

61. Help their child express themselves with words when they are angry or frustrated

☐ every time ☐ almost every time ☐ sometimes ☐ seldom ☐ never

62. Asked or searched for help with parenting when they needed it

☐ every day ☐ almost every day ☐ sometimes ☐ seldom ☐ never

63. How often do adults in your state mentor an unrelated child (like being a Big Brother or Big Sister)

☐ Every time it's needed ☐ Most of the times it's needed ☐ sometimes ☐ Rarely

III. In this final section we are interested in the opinions of those important to you. Thinking about those who you look up to and whose opinion you value, please indicate what you think they believe. Even if you are not sure about their opinion, please give us your best guess.

Thinking about those people whose opinions you trust and respect, how strongly do you believe they would agree or disagree with the following statements:

64. Letting children know when you like what they are doing is a good way to teach a child how to behave

☐ Strongly agree ☐ Agree ☐ Neither agree or disagree ☐ Disagree ☐ Strongly disagree

65. Always trying to comfort a crying infant will spoil the baby

☐ Strongly agree ☐ Agree ☐ Neither agree or disagree ☐ Disagree ☐ Strongly disagree

66. Playing with or reading a story to young children every day will help the child's brain develop

☐ Strongly agree ☐ Agree ☐ Neither agree or disagree ☐ Disagree ☐ Strongly disagree

67. Yelling at or fighting with another adult in front of your child or where the child could hear is bad for the child's health

☐ Strongly agree ☐ Agree ☐ Neither agree or disagree ☐ Disagree ☐ Strongly disagree

68. Spanking your child on the bottom is a necessary part of parenting

☐ Strongly agree ☐ Agree ☐ Neither agree or disagree ☐ Disagree ☐ Strongly disagree

69. Helping children express themselves with words when they are angry or frustrated is better than getting mad at them

☐ Strongly agree ☐ Agree ☐ Neither agree or disagree ☐ Disagree ☐ Strongly disagree

70. Asking or searching for help with parenting means there's something wrong with you because you should know how to parent your child

☐ Strongly agree ☐ Agree ☐ Neither agree or disagree ☐ Disagree ☐ Strongly disagree

71. Being a mentor (like a Big Brother or Big Sister) to an unrelated child is a good use of your time

☐ Strongly agree ☐ Agree ☐ Neither agree or disagree ☐ Disagree ☐ Strongly disagree

APPENDIX E

State Council on Child Abuse and Neglect (SCCAN)

SCCAN Membership

15 MEMBERS APPOINTED BY THE GOVERNOR

Name	Representing	Jurisdiction	Email	Address
